

Results of the XIII International Conference "Theoretical and Clinical Aspects
application of bioresonance and multiresonance therapy "
M.Yu. Gotovsky
(Center for intelligent medical systems "IMEDIS", Moscow)

On April 21-22, the annual XIII International Conference "Theoretical and Clinical Aspects of the Application of Bioresonance and Multiresonance Therapy", organized by the Center for Intelligent Medical Systems "IMEDIS" (Moscow), was held in Moscow.

The conference presented messages from Russia (81), Ukraine (14), the Republic of Belarus (5), Austria (3), Kazakhstan (2), Latvia (2) and one each from Armenia, Great Britain, Hungary, Greece, Israel, Lithuania and Moldova. Among the conference participants were specialists from leading research institutes, medical centers and universities, hospitals and clinics, as well as doctors in private medical practice.

In speeches at the plenary sessions, 66 reports were heard on theoretical issues and practical application of the methods of bioresonance and multiresonance therapy, electropunctural diagnostics by the method of R. Voll and the vegetative resonance test "IMEDIS-TEST".

The following main directions are reflected in the speeches and reports of the conference:

- theoretical issues of bioresonance therapy;
- experimental and clinical and physiological studies of mechanisms biological and therapeutic effects of bioresonance therapy;
- analysis and improvement of diagnostic capabilities of methods

electropunctural diagnostics;

- clinical aspects of the application of methods of vegetative resonance test

"IMEDIS-TEST" and bioresonance therapy;

- new mechanisms and possibilities of color light therapy;

- using the methods of bioresonance therapy and vegetative resonance test

"IMEDIS-TEST" in the conditions of geopathogenic zones.

At the conference, further scientific directions and ways of using the methods of electropuncture diagnostics, bioresonance and multiresonance therapy in medical practice were discussed and determined.

Materials of the XIII International Conference "Theoretical and Clinical Aspects of the Application of Bioresonance and Multiresonance Therapy" have been published.
