

Successful infertility treatment
A.V. Makarevich
("Center for Information Medicine", Minsk, Belarus)

I want to tell you about my first, really significant for me and the patient, respectively, the success of using the hardware-software complex "IMEDIS-EXPERT".

On October 30, 2004, a young woman, Elena P., came to see me at the center. Born in 1974 with complaints of frequent inflammatory gynecological diseases, periodically serous discharge from the genital tract, aching pains in the lower abdomen, epigastrium and lower back, inability to become pregnant for a long time, despite a regular sex life.

The duration of the disease is about 6 years. She was treated by traditional methods and methods (massive doses of antibiotics and other "chemical" agents, physiotherapy), inpatient and outpatient with temporary improvements. The patient has never become pregnant.

As a result of diagnostics using ART, it was revealed:

- general geopathogenic load (2),
- the influence of the Hartmann grid,
- radioactive load 1 tbsp.,
- electromagnetic force fields,
- electromagnetic burden 4 tbsp.,
- tension of the endocrine system 2 tbsp.,
- mental stress 3 tbsp.
- a high degree of tension of the immune system,
- polydeficiency in vitamins and minerals,
- imbalance of female sex hormones,
- acute gastritis + F495-498 (*Helicobacter pylori*),
- chronic pyelonephritis + F454-456 (ureaplasma),
- chronic adnexitis + F70 (chlamydia), F99-100 (herpes simplex),
- vaginal dysbiosis + F283 (thrush), F282, F410 (vaginal trichomonas (N)),

- dysbiosis of the large intestine + F271-274 (*Candida stellatoidea* and *Cruzei*).

There was also a general "asthenization" of the patient and periodic "withdrawal into depression", apparently associated with the results of previous treatment and the inability to get pregnant.

Therefore, in order to effectively conduct and bring the course of treatment to a logical outcome, the tactic of "small steps" was chosen, starting with the normalization of the patient's psychosomatic state, which subsequently (important!) Was decisive for obtaining the result.

At the very first session of induction therapy (program No. 5 "Peace"), the patient felt relief and (important!) Believed the doctor. The tactics and purpose of the treatment were explained to her: the gradual elimination of all possible causes of infertility. For, as the great Hippocrates used to say: there is no reason - there is no disease (problem).

I must say that she REALLY wanted to have a child and conscientiously followed all the doctor's recommendations. She was only told that it was

POSSIBLE, using the equipment and technologies of the Center "IMEDIS". Of course, not everything was so smooth in the treatment, it was interrupted several times for a short time for various reasons, but the final result is important, as they say.

So, it was carried out:

1st stage of treatment: normalization of the patient's psychosomatic status (induction programs No. 5 "Rest", No. 8 "Sterss I") once a week, use of Bach Flowers (honeysuckle, etc.), general bioresonance therapy according to 4th strategy. Elimination of geomagnetic radioactive and electromagnetic loads (6.2Hz), the use of drainage preparations from the companies "OHOM" and "HOMEOS".

2nd stage of treatment: elimination of inflammatory processes in the body and correction of dysbiosis of the vagina and large intestine: resonant frequency programs for the identified pathogens from 8-10 to 22 (chlamydia) minutes per frequency, with constant monitoring of the patient's effectiveness and complaints + OBR drug and drainage preparations mentioned above. Taking probiotics company NSP "Bifidophilus flora force".

3rd stage of treatment: correction of hormonal disorders using induction programs stress endocrine neuroendocrine regulation, etc., programs E (for infertility) organism with regulation",

In parallel, her husband was undergoing treatment, who had chlamydial prostatitis, and other, "minor" problems.

As a result of the "measures" carried out, the patient became pregnant and gave birth to her son Alyosha by caesarean section in February 2006. I must say that after the patient found out about pregnancy, she no longer visited the medical center. The pregnancy was proceeding generally well.

Conclusions: practical application Agroindustrial complex "IMEDIS-EXPERT" allows:

1. Effectively diagnose and treat infertility without the use of expensive and often unsafe methods for the health of patients.
 2. Avoid surgical interventions and possible complications from them application.
 3. Avoid the use of "chemical" drugs and side effects from their application.
 4. Simultaneously solve other health problems, incl. and on psychosomatic and psychological levels.
- And just give people the joy of being!
