

Experience in treating skin diseases with RFT and BRT

I.N. Ikhsanova

(LLC "Center for Energy Information Medicine", Samara, Russia)

Patient S. He applied to CEM in June 2006 with complaints of rashes in the face, elbows, knees, sternum, on the back. The rashes were in the nature of spots.-weeping, itching. Disturb the patient for 2 years.

As a result of ART, it was found that the intestines, stomach, liver, bilious ways golden staphylococcus, intestinal lamblia, yeast fungi. In addition, the patient was diagnosed with tonsillitis, chronic where Staphylococcus aureus was also tested.

Treatment was recommended, including diet, RFT, ART. The patient was given a list of products that were recommended to be excluded, because they were allergens. The recommended diet was selected taking into account the revealed pathology.

During 10 sessions of resonance-frequency therapy, the patient was recommended to undergo 3-fold hydrocolonotherapy with an interval of 1 time per week, as well as a drug containing lactum and bifidumflora was prescribed orally. RFT treatment in the first 3 sessions was combined with general bioresonance therapy. Along with RFT, a drug was prescribed, recorded on homeopathic crumbs, containing frequencies DESINTOXINATION IN ALLERGIES, IN PARASITIC DISEASES, IN FUNGAL DISEASES, BSR on the biliary tract, treatment with brain rhythms 3 times with an interval of 1 week (intensity- 20 cu). In addition, within 1 month the patient drank min. water Donat magnesium in order to enhance the choleretic effect. Against the background of this therapy, the patient's condition improved significantly, and the rash disappeared completely. At the site of the rash, areas of hyperpigmentation remained for a month.

Control after treatment showed that the pathogens identified earlier in the diagnosis are not tested. The patient was asked to report for control after 6 months.
