

Possibilities of APK "IMEDIS-EXPERT" in diagnostics and therapy
occupational diseases
S.K. Makina
(Medical center "Vega-plus", Petropavlovsk Kazakhstan)

From the position of energy-information medicine, diseases are perceived not as an evil that must be fought, but as an expression of the natural healing process, the natural mechanism of detoxification, as biologically feasible defense processes against toxic factors of exogenous or endogenous genesis. In modern life, in the context of the growing influence of harmful environmental factors, the use of drugs of chemical origin, the emergence of "poisons of civilization": insecticides, pesticides, industrial poisons, etc., it becomes relevant to use various methods of therapy in order to remove these toxins.

The hardware and software complex (HSC) "IMEDIS-EXPERT" of the Center "IMEDIS" (Moscow) allows assessing the patient's condition based on the analysis of the main integrative indicators and other specific tests in the mode of the vegetative resonance test (ART). With the help of ART, it is possible to identify a resonant response to the presence of industrial toxins.

The pronounced damaging effects of industrial toxins on human health were observed in two patients.

1. Patient A., born in 2002 The only child in the family. I contacted admission to "Vega-plus" 09.11.2005

Has been registered with the dispensary since 2003 in the children's clinic, with a clinical diagnosis of Proteinuria. Only the fact of proteinuria was stated, therapy was not actually carried out. Data from additional survey methods from 21.10. 2005 - proteinuria in the range of 0.33 g / l. General and biochemical blood tests are within normal limits. Ultrasound data of the bladder: ultrasound signs of cystitis; Ultrasound of the kidneys: no pathology. Gynecologist: healthy.

Testing in the ART mode, at level I, on the above APC revealed the key organ "bladder", in the absence of a resonant response to the key infection, intoxic III, miasm - psora. From a conversation with the girl's mother, it was revealed that her mother works at a thermal power station. The profession is associated with direct contact with chemicals: ammonia, phosphates, three sodium phosphate, ferrous sulfate, lime, vapors of acids, alkalis. During the entire pregnancy, the mother was in contact with the above toxins and did not follow the basic safety rules. According to my mother, I felt good during pregnancy, the birth was calm. Nevertheless, the girl showed a resonant response to sodium pyrophosphate, sodium phosphate, phosphate, triphosphate; ammonia Comp; ammonia, vapors Comp.

Endogenous bioresonance therapy (BRT), exogenous BRT - programs E339 (sodium phosphate), 450 (triphosphates); sodium pyrophosphate D6 – D15; Fuzailov's drug D6-D10000; L-methionine, L-asparagine, drainages of the company "ONOM"; nosodes - Proteus D6, bifidobacteria D6. The therapy sessions were held on 09.11 and 24.12.05; 02.22.06g; 03.24.06; 06/26/06 As a result

complex treatment, since 22.12.05, in urine tests, the protein is consistently negative, against the background of normal indicators of general and biochemical blood tests. Monitoring of urine and blood tests is carried out once a month until now.

2. Patient D., born in 1952 She turned to Vega-plus on 06.06.2006. She has been registered with a neurologist for 20 years with a diagnosis of multiple sclerosis, cerebrospinal form. Complaints of general weakness, dizziness, severe weakness in the legs, darkening in the eyes at the slightest physical exertion, difficulty walking even within the apartment. Needs care.

When testing by the ART + method at level 2, problems were revealed at the level of the central nervous system (CNS): the thoracic part of the spinal cord, the cervical spinal cord, the pons varoli, the white matter of the cerebellum, the temporal lobe of the left hemisphere. A resonant response was obtained through the disturbed structures of the central nervous system to schistosome, echinococcus, industrial poisons: sodium sulfate, potassium phosphate, silver (dye), sodium - calcium polyphosphate, sodium carbonate, sodium hydrogen sulfite, sodium hydroxide, polyphosphate, sodium lauryl sulfate, nonan,

palladium, alkyl mercury, sulfuric acid, selenium-methionine, silver nitrate, cyanide mercury; miasm - psora, chromosomes 3, 5, 9, 12; preparations from the group of systemic spiritual adaptants.

The patient had contact with almost all of the above poisons at work for many years. According to the patient, she not only did not follow the elementary safety rules, but also thoughtlessly rudely violated them, for example: "she dipped her hands into chemical solutions so that the skin was soft", etc.

Complex therapy was carried out using the therapeutic module of the APK "IMEDIS-EXPERT".

Therapy sessions are once a month. Between the sessions, the appointment of information drugs is prescribed.

The therapy used the method of targeting by the authors Mkhitarian K.N., Kudaeva A.E., Khodarevoy N.K. The targeted blood nosodes "NANKr" were manufactured electronically on the basis of the problems found.

Private bioresonance preparations have been created: "cervical spinal cord" and "temporal lobe of the brain". Resonant frequency therapy for infections and programs E92 – E85 (balance); E206, 265, 7 (sclerosis), E12 (spinal cord). The drug Fuzailova was introduced on 08/07/06 once.

As a result of the therapy, the darkening in the eyes quickly disappeared and the disturbed pain sensitivity was restored from the D4-5 level. General weakness significantly decreased and weakness in the legs moderately decreased. Gradually began to do housework (cooking, cleaning the house). In August, she could independently go shopping at the nearest store and go to the country.

In the fall, I went to see a neurologist for the first time on foot without using a cane (three bus stops). I also returned home on foot, but experienced a pronounced general weakness.

The achieved results continue to be sustainably maintained until

today, there remains a slight weakness in the legs and periodically worried about dizziness.

In January 2007, the patient received a course of annual planned rehabilitation treatment in a neurological department.

Conclusions:

1. APK "IMEDIS-EXPERT" in the diagnostic mode allows you to identify at the information level availability industrial poisons in the human body and the negative consequences of their damaging effects on health.

2. Agroindustrial complex "IMEDIS-EXPERT" in mode therapy allows neutralize or neutralize the consequences i am damaging industrial poisons in the human body.
