

Case from practice
I.P. Rakhmatullina
(LLC "Eliseeva Methodological Center", Moscow, Russia)

A 59-year-old female patient came to the Eliseeva Methodological Center with a diagnosis of "Condition after surgical treatment of stomach cancer grade III-A, T4N0M0, subtotal defeat".

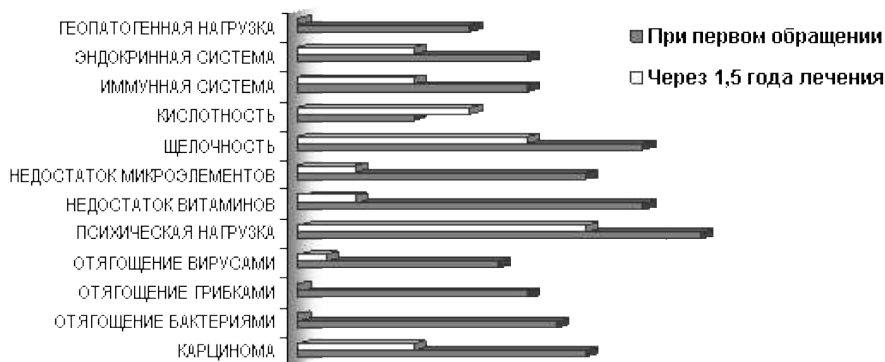

Anamnesis: Performed transperitoneal gastrectomy, lymphadenectomy D2. Consultation with a chemotherapist. Taking into account the general stable condition of the patient, morphological structure of the tumor and its extremely low sensitivity to specific drug treatment; Considering the prevalence of the tumor process and the volume of surgery performed, it was decided to refrain from chemotherapy. Dynamic observation is recommended.

Complaints: The patient has lost 35 kg in weight, weakness, frequent stools, abdominal pain. The ART method revealed: geopathogenic load of the 3rd stage; depletion of the endocrine system 4 tbsp.; depletion of the immune system 4 tbsp.; acidity - 2, alkalinity - 6 tbsp.; deficit trace elements (calcium, selenium, silicon, iodine, manganese), vitamins (A, E, B_{one}, IN₂, IN₁₂, folic acid; mental load of 7 tbsp.; burdening with viruses, bacteria, fungi; carcinoma D60 1 tbsp., 2 level, 3 level.

Treatment performed: frequency therapy, OBR, CBR preparations for the stomach meridian, trace elements, Bach Flowers, color therapy, Gepar Hel, CBR carcinoma drug.

The patient was examined at the Center in a month. Control ART was carried out, followed by stress therapy was prescribed. In parallel, she was observed by an oncologist at the place of residence.

After 1.5 years, the patient complains of anxiety, the state of health is satisfactory. Gaining weight. ART shows positive dynamics (see diagram 1): there is no geopathogenic load; endocrine load tension 3 tbsp., immune system tension 3 Art., acidity - 3, alkalinity - 4 tbsp.; deficiency of trace elements - iron, vitamins - B₁₂; mental load 5 tbsp.; bacterial, fungal load not tested, persists herpes virus D60; carcinoma D200 level 2, level 3.

Rice.

one. Positive dynamics in the therapy of a patient with a diagnosis: Condition after surgery treatment of gastric cancer stage III-A, T4N0M0.

Examination by an oncologist 10.01.2007. - Disease of the stomach, gastrectomia.

26.12.2006. Ultrasound of the liver, gallbladder, pancreas, kidneys, lymphatic nodes along the iliac vessels, masses are not visualized.
