

Clinical aspects of total biology
Rivkina T.
(Rimini, Italy; San Marino)

The real transformation of consciousness is this transformation that will change the state of the physical body and create a completely new creation.

Mayor

There are many paths, but the goal is one.
Buddhist saying.

First of all, I want to share with you my joy that I have the opportunity to work on this wonderful instrument - "IMEDISFOLL". In Russia, many are familiar with this name. Abroad it is different; but people familiar with this apparatus call it the "truth machine." Patients often come to me on the advice of friends, and I ask them why they wanted to undergo this examination.

"I was advised to go to this center, which has this Russian apparatus. They said that the device will tell you something about you that you don't even know about yourself. "

After I worked with cancer patients for 2 years, a certain picture of my health was formed. For a person to be happy and healthy, he absolutely needs:

1. Love God.
2. Have a job that 100% allows him to reveal his creative capabilities. A work that gives satisfaction, and the fruits of which he and others enjoy.
3. Have a happy relationship in a couple (For the Lord said: "It is not good man to be alone ").
4. Eat "healthy food" that gives a person a vital energy. If there is food that does not match your physical or psychological type, then the life force dissipates and weakens. It is important to remember that everything we drink and eat leaves information in our body for a long time. It changes our body and becomes part of our psychosomatic process. Are we using the nutrients and energies found in foods to bring happiness to our body and mind? To create health?

It is important not only what to eat, but also how to eat. What emotions do you experience at this time, what do you think about, are you in complete harmony and peace.

5. Engage in physical culture. Life is motion.
6. Be able to breathe correctly. Breath is an immortal elixir.

Every situation, every experience of our life, every fear, success, dream,

aspiration is a gift that contains the magic of health and happiness. True health is inner purity, strength and patience.

What causes the disease?

- Separation from God?
- Biological shock (according to Hamer)?
- Presence of helminths, bacteria, viruses?
- Is there a geopathogenic zone?
- Dysbacteriosis?
- Something else?
- All of the above?

In all cases, it is important to find the cause. Our true Self is Light, Light without borders, Love. Hippocrates argued that the true healers of the disease are the inner strength of a person. Spirit is a great and main inner healer. And if he finds the mind free, then he can act and heal.

Recovery involves breaking the cycle of a vicious circle (Figure 1).

Rice. Vicious circle.

We can get rid of a negative emotion only if we change our belief. Because belief determines behavior. The thought that revolves in the head day and night, when the situation cannot be resolved in any way, leads to the formation of a small "relay" in the brain area, having found a suitable solution - a disease. Thought is the programmer, the brain is the computer, the body is the machine. Our brain is a 15th generation computer (NASA's most advanced computer is the fifth generation) and it is impossible to have a computer more advanced than our brain. We are in the past, present and future at the same time. Our brain is a machine that cannot be wrong. The disease will reproduce the nature of a conflict that was not resolved at one time. Hamer put this in biological laws. If you change your belief, the brain can perfectly stop the disease, because he found a solution to the biological conflict. But if you do not resolve the question "What will happen next? What will I do next after my recovery? ", Then the brain can create a "disease" again, in the organ that exactly corresponds to the given problem.

Disease is a problem of the subconscious that has entered the biological system. Take, for example, a few women who have been abandoned by men for whatever reason. For one it will be a heavy loss, she will lament: "I

lost everything, my life, my soul. Never again will I be able to be happy ...! " If she believes in this, she will provoke the so-called. conflict of severe loss, leading to disease of the right ovary. Another woman in the same situation perceives the situation somewhat differently. What happened after 17 years of marriage is terrible for her !!! It is impossible to accept - "digest" this situation. Life is not fair! In this case, there will be a pathology of the stomach (up to cancer). The third, in the same situation, will begin to blame herself: "I am not capable of having a relationship with a man. I am nothing. " And this will lead to depression. ("I am not significant" + guilt). Another woman in the same situation will think: "But we felt so good together. I cared about him so much: cooked, washed, like my mother. This woman will go through a "nest conflict" which can lead to adenocarcinoma of the right breast. Another will survive this situation, simply as a separation (separation conflict). The result will be eczema. And the last one will say: "Just think, I lost one, but I will find 10 more of them!" And she will stay healthy.

If a person alone experiences an acute shock situation, and the brain does not find a solution to the conflict that has arisen, a special biological program is turned on, which is determined as a Hamer focus and is read on a tomogram of the brain.

Psychological conflicts are long-term chronic problems that a person has had time to adjust to. They are not defined as foci on a tomogram.

A 42-year-old patient came to see me after long-term treatment with many dermatologists and alternative medicine specialists, a hairdresser by profession. Diagnosis - psoriasis of the scalp and dermatitis of the skin of the chest and abdomen, The cause of the disease - from the point of view of total biology, "conflict of separation." The disease arose after the daughter left home for another country. Dysbacteriosis was treated, frequency programs of helminths, bacteria and fungi were used, general and specific drugs, inversion of substances used in the hairdresser's, which caused an allergic reaction in the patient, plus the techniques I developed. The patient is currently recovering.

The next patient, diagnosed with insulin-dependent diabetes, 78 years old, is a businesswoman who continues to successfully conduct her business. She came with complaints of increased fatigue. Despite taking insulin, the sugar content is 400 mg / nl. ART revealed changes: GPZ, biological index 20, tension of the endocrine system, DNA disturbance, mental stress, dysbiosis. From the point of view of total biology, it is a "conflict of fear" plus "resistance to someone or something."

In addition to the main treatment regimen, we tested children's cerebral program 7 and program 10, which were carried out once a week, with visualization of a digital code (for diabetes mellitus 8819977). During the session, the patient remembered herself at the age of eight. Once, after returning home from school, the girl was asked to call her father to the festively laid Christmas table. My father had never taken a rest during the day before. She went upstairs to her father's bedroom. I let him, but he did not respond. After that, she pulled his hand, and he fell off the bed. Father died (he had sugar

diabetes). At the time of the funeral, she was taken away from the house. Hence the "conflict of fear" - the sudden death of the father, and "resistance to someone or something" - resistance to leaving home for the duration of the funeral and separation from the father. During the last 3 months, the condition has been stable, the sugar level is 120, the insulin dose has been reduced by half.

I would like to tell you about one more patient. A 40-year-old man came to an appointment with a diagnosis of hepatitis C. His attending physician suggested taking a course of interferon, but the patient, having learned about the "Russian apparatus", decided to postpone the interferon treatment. Transaminases AST 86, ALT 194, GGT 60, virus - HCV RNA quantitative 590 thousand UL / ml.

From the point of view of total biology, the liver is a "conflict of scarcity". Fear of lack (in every sense): money, vacation, food. Indeed, the young man works 5 months a year, spending the rest of his time traveling, fearing to stay in a certain place for a longer time.

Treatment was carried out: dysbiosis, removal of the effect of GPZ, frequency therapy of helminths, bacteria, viruses, hydrocolonotherapy, induction programs 5, 6, 9, 10, 11, 12; cerebral programs 5, 6, 11 with visualization of the digital code of hepatitis, sessions of Neuro-Emotional Integration with decoding of the program of fear of staying in one place without money. The Belgian drug Modukar was used as an immunomodulator, which can now be found in the medical selector of the IMEDIS-VOLL hardware-software complex. Elimination of the cicatricial interference field was carried out with Graphytes Homaccord, Heel and Ultima Ratio, Omeopiacenza, 1 ml in 1 syringe once a week. The cicatricial field of interference was the navel. (The navel is a memory of the psychological trauma a mother and baby have during pregnancy.)

After the treatment, the HCV RNA virus dropped to 30 thousand ul / ml, but the transaminases remained high (the presence of cytomegalovirus, which we are treating at this stage).

For recovery you need:

1. Resolution of the conflict by 100%.
2. 100% confidence in recovery.
3. Skillful use of the hardware and software complex "IMEDIS-

FOLL.

In preparing the article, materials from seminars by Claude Sabbah, Michele Noel, Dr. Hamer, Rosa Moreschi.
