

The results of the use of the anti-cancer drug Fuzailova  
"MR-anti-protein blocker"  
Kim P.N.  
(PE "Doctor Kim", Tashkent, Uzbekistan)

For three years, more than 200 cancer patients with different tumor localizations have been treated. In severe patients, the quality of the last months of life improved, there was an improvement in the condition, pain decreased, and appetite appeared. In some patients, after some improvement, the condition worsened, the process began to progress.

We have achieved good results in the treatment of tumors of the spinal cord and brain, as well as in rehabilitation after surgery.

Examples of

1. Kahn P., born in 1955. He contacted us on September 15, 2002 with diagnosis: Medulloblastoma of the lumbar spine. He refused the operation. Fuzailov's drug was administered twice with a monthly break. Two weeks after the first infusion, the pain subsided. There was no relapse of the disease. Control examination is carried out every six months.

2. Abdumalikova G., born in 1960. Contacted us on May 19, 2004 year with a diagnosis: Medulloblastoma of the lumbar spine after surgery, when the tumor could not be removed. Ill for 2 years. Fuzailov's drug was administered 4 times. After the first injection, the patient could already sit, and after the fourth injection she could get up on her own and walk.

3. Davganina N., born in 1953. Applied on January 16, 2004 from diagnosis: Cancer of the right lung with metastases to the left lung, bronchi, lymph nodes, liver after surgery and two courses of chemotherapy. Fuzailov's drug was administered six times with a monthly break. The process has completely stopped, the metastases have disappeared.

4. Ibragimova Kholima, born in 1935. Applied on June 12, 2004 with a diagnosis: Cancer of the left breast with metastases to the lymph nodes in the right breast.

After two injections, the tumor shrank from the size of a chicken egg to the size of a walnut and became soft in consistency. No pain.

5. Eshankulova U., born in 1972. Applied on October 14, 2002 from diagnosis: Pituitary adenoma with increased testosterone and androgen levels with decreased production of follicle-stimulating and luteinizing hormone. The drug was administered three times. As a result of the treatment, the headaches stopped, the menstrual cycle returned to normal, and the pregnancy occurred twice.

All patients were prescribed individually effective homeopathic and bioresonance medications concurrently with treatment with Fuzailov's drug. Of the induction programs, the Rest Program and the Stress Program III (endocrine regulation) were used more often. A carrot diet with sour juices and the exclusion of sweets and milk was prescribed.
