

## Cleansing the body and optimizing homeostasis as a prerequisite for health

Kempe N.

(Biosensor Research Group of the Ludwig Boltzmann Society, Graz, Austria)

Ten years of experience with the IMEDIS system, constant search for the most effective therapy regimens and analysis of the situation shows that when assessing the state of health (or illness) of a patient, it is simply necessary to take into account the effect on him the environment and his way of life, and not only at the moment, but throughout his life. The report will talk about the physicochemical and biological consequences of abnormalities in the metabolism of patients, their role in the development of the disease and the possibility of correction using the IMEDIS system.

Contamination of the organism, unfortunately, is to a large extent a product of civilization. Back in the 1980s, the Herald Tribune presented a graphic picture of the consequences of civilization.

Energy information medicine gives us great opportunities to control and correct the state of the body. It is never too late to realize the situation and as soon as possible to transfer the body to work in accordance with its natural capabilities. This applies both to patients who must take responsibility for their health, and to doctors and healers who are trying to cope with diseases using the methods available to them.

Life processes in the body are very complex and, by and large, are completely inaccessible to our consciousness. But nevertheless, it is possible and necessary to create models functioning of the human body. Although disorders and diseases are of a complex nature (disorders in the physical body, psyche, prenatal events, etc.), it can be argued that the body's metabolism reflects well the state of homeostasis.

One of the indicators for assessing the quality of the body's metabolism is the acid-base ratio of the whole organism as a whole, and of its individual organs and systems. The assessment of this state is made on the pH scale (pH - potentia hydrogenii). Recall that this scale has 14 gradations. Simplistically, we can say that the pH value shows how acidic (how many positively charged acidic molecules) or alkaline (how many negatively charged alkaline molecules) the medium in question is. The pH value determines the type and intensity of chemical reactions in this environment. An average value of 7 corresponds to the state of pure water at 25 ° C, values above 7 - an alkaline region, below 7 - acidic. Since the scale is logarithmic, this means that, for example, pH = 5 means ten times more acidity than pH = 7.

How important this concept is for life is shown in the following table (according to [1]).

table

pH - kingdoms of nature

NS	Categories	NS
14.0	Divine, eternal life, love, oxygen, genius, SQ	14.0
12.0	Angels, deities, white, modesty, harmony, art, joy Amniotic fluid, respect,	12.0
8.5	vigilance, generosity, Na, K, Ca, Mg, truthfulness, meditation, faith, prayer, alkaline body care products	8.5
8.2	Pleasant smells, high thoughts, beauty, light,	8.2
8.1	Yoga, Greek antique art, caring, bitter medicine, fasting, courage	8.1
7.5	Herbal infusions, moderation, reverence, vegetarianism, strength	7.5
7.4	Blood, health, tolerance, calmness, tea drinking, Mesenchyme's	7.4
7.2	joy, ligaments, sympathy	7.2
7	Pure water at 25 ° C, pass, crossing	7
6.9	Reptile blood, unsympathetic, eating meat, fears, sadness Cancer cell,	6.9
6.4	intolerance, pleasure, addiction, disappointment Heart attack, pain, noise,	6.4
6.3	oppression, immensity, wealth	6.3
5.9	Diseases, aggressiveness, Cl, P, S, materialism, natural sciences	5.9
5.0	Fashionable cosmetics, lies, darkness, wars, fears, mass media	5.0
3.0	Stink, bullying, black, arrogance, abuse, cruelty, evil genius, atomic bomb, IQ	3.0
1.0	Satan, unexpected death, hatred, nihilism, hydrogen	1.0

This table is, of course, not scientific, but in allegorical form it represents the complexity and importance of the problem.

Different organs and systems have different pH values, which, moreover, changes at different times of the day and also depends on food intake, movement, experiences, mental stress and environmental actions (technogenic, electromagnetic and geopathogenic loads, chemical effects, radioactivity, etc.). Here's the data for the some generalized average person:

	NS		NS
Saliva	6.5-7.0	Stomach (juice)	1.5-1.8
Cardiac muscle	6.9	Blood	7.35-7.45
Urine (morning)	5.05-5.7.0	Mesenchyme	7.1-7.25
Amniotic fluid	8.5		

Violation of the pH state one of the grave consequences of civilization. These violations lead to slugging of organs and systems of the body and, as a result, to

various diseases. The current situation has led to the emergence of various methods of cleansing the body of toxins.

The "IMEDIS" system has many possibilities for cleansing the body, which can be successfully applied both on its own and in combination with other activities (breathing exercises, herbal medicine, baths, various diets).

Below, on the basis of specific examples, we carry out some cleaning techniques based solely on the capabilities of the IMEDIS system.

As we indicated earlier, at the first appointment, we conduct research that includes all three types of diagnostics: segmental diagnostics, Voll study and vegetative resonance test. At the same time, we must check the acid-base state of the body and its individual organs and systems. Next, a treatment regimen is adopted, which necessarily includes measures to cleanse the body. Over the years, we are increasingly moving away from symptomatic treatment. We use the latter only in acute conditions. It turned out that this kind of treatment is much more promising and does not give relapses. For example, if not long ago, in the case of allergies or severe mycosis, we fought these conditions directly, inverting the allergen or eliminating specific fungi, now we primarily carry out treatment to systematically strengthen the immune system, optimization of control systems and purification of the body from toxins. To clarify what has been said, I will give a few examples.

1. Patient, 38 years old (manager). In recent years, the so-called colds. Great fatigue. Tightness in the shoulder girdle. Sleep deterioration (falls asleep with difficulty, wakes up at night about 1-3 hours, in the morning the head is heavy), the skin is dry, on the elbows and in other places of peeling, hair loss has appeared. All the increasing pains in the spine. Flatulence. Seasonal allergy appeared (rhinitis already in March at the first flowering of trees). Deterioration of vision. Although he goes in for sports (he visits the fitness center 3 times a week), his weight is growing steadily. I went through a study in several clinics, nothing "special" was found, but quite a lot of drugs were prescribed. For the last 2 years he has been taking antibiotics 3-4 times a year. Prolapse of L 4. The proposed operation. He came to us in despair and with a full bag of various medications (psychoneuroleptics, beta-blockers, etc.).

The study showed a strong electromagnetic and radioactive load, toxicosis, mycosis, viral burden, dysbiosis, weakened immunity, disorders in the endocrine system, deficiencies in minerals and vitamins, hormonal abnormalities, mental problems, Trichomonas, giardiasis, Helicobacter pylori. Disturbances in the work of a number of organs and ... a pre-cancerous state. Multicolor phantoms in segmental diagnostics with a predominance of pathological disorders (black and purple color of the head and upper body areas on the left). Disturbances in the 3rd and 5th chakras.

They offered not to do the operation. According to Dorr's method, the vertebral disc was set, the pain was temporarily relieved by electropuncture therapy using an "inductor", and treatment was started:

1) Recording in the BRT mode of body vibrations, organotropic, horizontally 440 sec. into 2 globules.

2) Carrying out the induction program "Stress 1" in the BRT mode through the electrodes (the patient lies in a chair, eyes closed, a heating pad on his legs, the light is dim). The following drugs are included in the recipe: OP pineal gland, pituitary gland, hypothalamus - all in D6 potency, MKP 13, 14, 15 (posterior median, anterior median, pineal gland); ONOM preparations - Sin 39, DRE 3, 7 and 16; DIS 7, 9 and 18; pre-tested M1 and M5 and Detox 4, 7 and Endotox 5 and 17. In the third container (in inversion) were placed the pre-recorded 2 globules, in the second container a test tube with a viscum album C200 Fa Spagira. At the last stage of therapy, the globules are removed from the third container, and a bottle of high-cluster water is placed in the first container (sometimes we take a saline solution). At the end of therapy, we make quadrant measurements and segmental diagnostics. The result is good. We explain and show this to the patient. Taking the prescribed drug

(being tested) 3 times a day, three drops in a glass of good water. Prescribe a solution of magnesium chloride (33 g per 1 liter of good water) 30 ml in the morning. They asked me to stop taking antidepressants and a number of other allopathic drugs. Appointed every second day of a bath with sea salt and 10 drops of the recorded preparation. They offered to sleep with a water heating pad on the liver. After therapy, the patient feels well, relieved, almost no pain.

3) In two weeks. Advanced diagnostics: 4-quadrant, segmental diagnostics, "IMEDIS-TEST". The anamnesis is not bad: there is a clear improvement in many parameters, better sleep and better digestion. The condition of the skin has improved greatly. There is pain in the vertebra, but bearable. I took almost no pain relievers. Therapy: 2 cycles of BRT. First roundabout 440 sec. with preparations A-Plex 1, 2 and 3; D-Plex 9, F-Plex 1, 4, 5, 8 and 15; EQ-Plex 16. Recording of 3 globules in 1 container. Second cycle, also circular 440 sec. The globules recorded in the first cycle are placed in the second container. In the second half of the cycle, the drug was recorded in the first container (for water), 3 drops are prescribed three times a day per glass of good water. Post-therapy segmental diagnostic check: compensation for deviations. After the therapy, the patient feels great and is full of creative energy. At the end of the therapy session, there is a fifteen-minute conversation about nutrition and metabolism.

4) After 4 weeks. The patient is optimistic, full of confidence. Somatic old there are almost no symptoms, digestion has improved, cravings for sweets have disappeared, efficiency has increased, and vision has improved. We do segmental diagnostics again and check some parameters of "IMEDIS-TEST". The result is good, the acid-base balance is in order. After testing and analyzing the data obtained, we carry out the following therapy: in BRT mode, Rife time modulation 1800 sec. "Parasites" with the introduction from the selector of drainage and detoxification drugs from the DIS and DRE series of the "OHOM" company and OP liver, kidneys, lungs, bladder - all in D6 potency. During therapy, we smoothly change the gain from 7 to 5. During the last 300 sec. we write globules in the 1st container. Result: segmental diagnosis after therapy shows an increase in dysfunctions in some organs (stomach, part of the small intestine, left lung). The result is explained to the patient. We ask you to take the drug every second day, 1 globule 6 times a day, drink evenly, control the stool. After 14 days, we receive a patient report by e-mail: the first 5 days a noticeable deterioration (uneven stools with an unpleasant odor, flatulence, skin irritations, sore throat, etc.). Then there was an improvement.

5) After six weeks. Controlling reception. The history is excellent. Patient optimistic and full of energy. Although everyone around him sneezes and coughs, the cold has not touched him. Good sleep. Decreased appetite for meat. The diagnostic results are good. We carry out one cycle of bioresonance therapy with cleansing preparations FITOX "O.T.I." 1, 2, 3, 6, 33 and 44, we write globules in the BRT process. Reception: the first week - 3 times a day, 2 globules, the second week - 2 times a day, 2 globules. This cycle is repeated every 6 weeks.

Follow-up for 14 months: the patient feels good, full of strength and energy, rejuvenated. I have lost 6 kilograms and have never been sick. Pollen allergy did not appear in the spring.

2. Patient, 43 years old. Loss of sensation in the upper and lower ones for about two years limbs, uncertainty when walking, pain in muscles and head, pain in the eyes, severe deterioration of vision, increasing depression, general weakness, constant fatigue, works with difficulty, is ill a lot. The official diagnosis is multiple sclerosis. Interferon and bettaferon do not help, I stopped taking them. Is in despair and fear. She came to us. Brought all the clinical trials. The tomography really shows several very small lesions in the brain, hemoglobin and erythrocytes are below normal. Everything else is fine.

First method: all studies have been carried out, as in the previous case. Result:

1) 4-quadrant measurements - all values are uneven and significantly lower norms.

2) Segmental diagnosis: severe dysfunction with pathological disorders in the area of the head on the left and right, as well as the left shoulder, left arm. Intestines, stomach, pancreas, spleen - severe hyperfunction, kidneys - moderate hyperfunction. An increase in the virtual load per division leads to an increase in the pathology (the phantom color changes to black), i.e. the patient cannot withstand the load in general, the type of regulation is weak, oxygen deficiency, manifested parasymphictonia. Syndromes: cerebral, urogenital.

3) Measurements according to R. Voll.

4) Changes in vegetative resonant test: radioactive and electromagnetic load, depletion of the immune system, endocrine disorders system, mental stress of the 4th degree, endogenous depression, strong viral burdens (adenovirus, all Coxsackie, Epstein-Barr, herpes viruses and a number of others in the selector), mycosis, dysbiosis, lack of trace elements and vitamins (although he takes multivitamins!), organ studies by groups - in prefabricated preparations "head", "chest", "abdomen", "joints", "blood", "nervous system", "cerebrospinal fluid", "lymph" - deviations; all layers of the mesenchyme are contaminated, Intox I and Intox II, severe violations of the acid-base balance, burdening with mercury and heavy metals, lymphatic burden. It would seem that it is a classic symptomatology of multiple sclerosis, but diagnosis using the IMEDIS-TEST method does not confirm multiple sclerosis.

Nevertheless, we begin to treat the way we usually treat this disease. The patient lives in another country, can come rarely and only for two or three days. We carry out the following three sessions of therapy (one every day).

First day (immediately after diagnosis). Basic BRT 440 sec. with the recording of three globules in the first container, transfer them to the third container and add from the OP selector adenohipophysis, pineal gland, pituitary gland, hypothalamus, neurohypophysis, thyroid and parathyroid glands, thymus, all in D6 potency, FM Viroide, Viren A, Viren B, catalyst Magnesium and seroimmune preparations of the brain. We carry out this complex therapy for 440 sec. with recording of globules in the first container, cup (G1). Next, we display all drugs, except for three FM drugs, and inject drugs of the tested viruses into D200, and some into D400 (herpes). We carry out a circular BRT for 240 sec. with a gain of 6, while recording globules (F2). We are not giving the drug for the time being.

Second day. We carry out therapy according to the method of Yu.V. Gotovsky - a general BR-drug, but not through Cuprum metallicum D400, but after 4 cu. Epiphysis D4, tested in the section "mental stress". Duration of therapy - 3 minutes, recording on water (drops) (K1).

The third day. Complete diagnostic check again. Improvement in almost all parameters: 4-quadrant violations - indicators are within normal limits, measurements according to R. Voll - more meridians are normal, and there are no "arrow falls", "IMEDIS-TEST" shows improvement in a number of parameters. Final therapy is carried out - BRT in the mode of time modulation with the induction program "Cerebral", in the second container - drug K1, in the fourth - three globules 6.2 Hz (pre-recorded on the inductor), in the prescription - seroimmune drugs 1, 2, 3, 4, 5 and 8. At the last stage, the preparation G3 is recorded in the first container. After the therapy, a slight headache appeared, which disappeared after half an hour. The drugs are prescribed as follows:

preparation G1: taking on even days 7 times 2 globules, on odd days 2 times 2 globules (according to Schimmel), after 14 days daily 2 times 1 globule;

preparation G2: once a week, 6 globules once a day (for a total of 6 weeks);

preparation G3: taking 5 globules 2 times a week;

drug K1 once a day, dilute 4 drops in a glass of good water, if depression persists, then the drug is taken 2 times a day.

The patient leaves in good health. The first message from her was half dormant after 14 days. The condition is still improving. The deterioration begins after the next 14 days. The message after another 14 days - everything deteriorated to its previous state, and even

became worse, in one eye severe loss of vision, headaches, permanent fatigue. Since one of our students works at the IMEDIS complex in her country, I ask him to continue the treatment. After 10 days, he carries out the treatment according to the same plan, but instead of the cerebral program he uses the Depression I program. The patient again has a significant improvement, just like the first time, but this improved condition lasts only 17 days! Then again there is a sharp deterioration, in addition there were severe pains in the legs and arms. An attempt to use the multiple sclerosis nosode and organopreparations of the brain regions with viruses in inversion gave nothing. The patient walks very uncertainly, pains in the legs, arms and eyes, fatigue, depression. With difficulty he comes to our institute accompanied by her husband for three days.

We carry out the following treatment.

First session. Basic BRT 440 sec. with a record of three globules. Then we immediately carry out BRT in the mode of frequency modulation "Muscles" from the base by organs, in the load "44 Flamyar" spag., Cocksackie viruses of group B, - all in the D6 potency, Detox 3, 4, 7, 15, 18 and Endotox 6 and 17, phytopreparation - liver, lithotherapy - liver, Norus-preparation HP0310. Duration of therapy 1200 sec. Moreover, in the first 400 sec. the above globules are placed in the third container, then they are removed. During the last 200 sec. several globules are recorded, which the patient must take one at a time every hour.

The next session is in 24 hours. Anamnesis: the state of health is somewhat better, significantly less pain in the arms and legs, but still severe weakness and pain in the eyes. Therapy: frequency modulation with P. Schmidt's frequencies "Muscles" P. Schmidt 1200 sec. and at the first session of therapy. Recording of several globules (for one day), reception - 1 globule once an hour. In addition, we write on separate globules of the serum of the anterior chamber of the eye and lens and a number of OP of the eye in potency D6, please also take 2 globules once an hour.

Third appointment the next day. Diagnostic control first. Small improvement in all parameters, but 4-quadrant values are still low, and large dysfunctions in the head area. Good mood. There was hope. There is no pain, I began to step more confidently, there are almost no goosebumps in my left leg. Therapy: bioresonance therapy in the frequency modulation mode "Myalgia" 1200 sec, in the load of the OP Pituitary gland, Epiphysis, hypothalamus and amygdala, all in D6 potency, in addition, several drugs from Detox and Endotox and drugs from the Biooscillators series (A-Plex 3, SPlex 1, D-Plex 5 and F-Plex 24), all preparations were tested according to the IMEDISTEST method, but were selected by a biotensor. During the last 600 sec. globules were recorded. Reception 2 times a day, 2 globules. At the end of therapy (after about 5 minutes), a complete diagnosis is carried out, the results of which are very encouraging. Gone is the violation of acid-base balance, blockade of the mesenchyme and indication of depression. The counselor feels "pleasant" tiredness and has a feeling as if "a mountain has been lifted off her shoulders." Flies away to his homeland. He sends health reports every 14 days. There is a slow, systematic improvement. No pain. The load is growing. Started to work. I went on vacation to Thailand. Despite the terrible heat, she endured everything well. After 3 months, although the condition is good, sometimes there is pain in the calves. We will immediately send her globules from her latest recipe. The pain goes away 5 days after taking it. The state of health is still very good, there is no fatigue, good working capacity. At our request, I made a computed tomography: the lesions are much smaller in area and contrast. Blood test is normal.

Conclusions:

1. When diagnosing, it is always necessary to control the slagging of the body in the whole and for its individual systems.
2. treatment of ANY disease should ALWAYS be started with a serious

targeted systemic detoxification of the body.

3. In many cases, especially with chronic diseases, it is useful to conduct cleansing the body before starting treatment.
