

The place of bio- and multiresonance therapy in health restoration (facts,
 thought-provoking)
 Deryabina N.K.
 (Saratov, Russia)

Complex diseases with good treatment results are not uncommon in my practice. My specialty is a neuropathologist, with a small time difference (since 1970) - Zhen-chiu therapy, then homeopathy, manual therapy, etc. However, what became possible with the use of bio- and multiresonance therapy is deeply respected and amazes with its results. Perhaps the facts presented in the article will force those who still have doubts to take a fresh look at the current problems and believe in the existing reality. Below is a diagram that, in my opinion, reflects the current place of bio- and multi-resonance therapy in our lives, in the restoration and strengthening of health. The proposed name - "Energy Information and Resonance Therapy" is easier for patients and essentially reveals the basics of this type of treatment. At present, much attention has begun to be paid to information technology; resonant informational relationships in nature are often spoken and written about. We have a truly great achievement of our scientists, which has been strengthening and restoring health for many years. This is confirmed by numerous facts, including those given in the article.

Bio- and Multi-Resonance Therapy (Energy-Information-Resonance Therapy)		
Allopathic the medicine or Evident the medicine.	Traditional medicine	
	Western direction	Eastern direction
Therapy Surgery Gynecology Dermatology Pediatrics Hematology Oncology Neuropathology	homeopathy homotoxicology ...	Zhen-chiu Su Jok ...
	Homeosiniatry (the introduction of a homeopathic ampoule preparation into acupuncture points)	

Huge successes, achievements in various fields of medical knowledge made it possible to detail, while honing the skill, the art of mastering the problem. So, in surgery, neurosurgery, vascular surgery, cardiac surgery, eye microsurgery, etc. are distinguished. Can't be refuted
 oppose and, moreover, completely deny what we get - the result. Radiation is not visible, its effect is perceptible, and even then not immediately. And if someone does not know differential calculus, this does not mean that this does not exist. Some phenomena are inexplicable from the standpoint of modern knowledge, but it is not yet a fact that "this is not and cannot be." More recently, Zhen-chiu in Russia

they simply did not understand and did not accept, they considered it quackery. Now there is an officially approved specialty - a reflexologist. This does not surprise anyone. Much the same can be said about homeopathy.

Below are cases from practice that make us think about the effectiveness of bio-and multi-resonance therapy, its place and significance in our life.

1. Patient S., 74 years old, physician, academician. A person who believes in bio- and multiresonance therapy, in our treatment (at first he simply relied on me - he knew that I would not harm). The main problem addressed by 01.10. 2003 - frequent urination, especially at night - had to wake up and get up 7-8 times. Did not hold urine during the day when outside the house. Blood in the urine - at the end of the act of urination. Diagnosis - Prostate adenoma. Surgery is not indicated due to concomitant pathology. A detailed clinical diagnosis will take up a lot of space, and therefore, briefly: IHD, angina pectoris of exertion and rest; hypertension; atherosclerosis; heart rhythm disturbance, heart failure, history of ischemic stroke. In addition, it is the only kidney (the other was removed several years ago due to the oncological process and cysts in it). A treatment regimen has been drawn up, preparations have been made

- general and specific BR-drugs, frequent drugs, because discovered -

geopathogenic, radiation and electromagnetic loads, false polarity, positive testing of the drugs Konium, Rus, Psorinum. Preparations have been prepared. After 6 days, at the next appointment, the effectiveness and tolerability of the drugs that the patient took on the recommendation of the urologist were determined: Gentos (drops) - effective, Omnik (capsules) - ineffective. They did not cancel them. Other drugs prescribed by the therapist, cardiologist have also been checked, the dose has been specified. In the future, examination and treatment were carried out with a frequency of 1 time in 2-3 weeks. Induction programs were applied - Cerebral No. 15 and Schumann Waves No. 22. A change in state was noted after a few days. The patient began to urinate less often, the act of urination itself is better. (At the first appointment, which lasted about 2 hours, they had to take a break 2 times, the second appointment - without interruptions). Today - sleeps at night, gets up 1 time (more likely out of habit). The blood in the urine disappeared, the cause of which was schistosomiasis (resonance frequency therapy was carried out according to the F140 program with an intensity of 100 conventional units, a frequency drug was prepared for taking at home). The patient himself and his wife, note that in addition to urological manifestations, the general condition has improved - more strength, energy appeared, pain in the heart disappeared, and began to walk a lot. The treatment was carried out under the control of biochemical tests, cancer tests, ultrasound of the prostate gland. The data obtained confirm the positive dynamics. We continue the observation. The patient himself and his wife, note that in addition to urological manifestations, the general condition has improved - more strength, energy appeared, pain in the heart disappeared, and began to walk a lot. The treatment was carried out under the control of biochemical tests, cancer tests, ultrasound of the prostate gland. The data obtained confirm the positive dynamics. We continue the observation. The patient himself and his wife, note that in addition to urological manifestations, the general condition has improved - more strength, energy appeared, pain in the heart disappeared, and began to walk a lot. The treatment was carried out under the control of biochemical tests, cancer tests, ultrasound of the prostate gland. The data obtained confirm the positive dynamics. We continue the observation.

2. Patient P. - 12 years old. Parents' complaints - the girl stopped growing, the difference with a twin sister is 10 cm (parents and both daughters came to the reception). Outwardly - no peculiarities. The conclusion of the pediatrician is healthy. The endocrinologist, after an examination that did not reveal any pathology, recommended the administration of the hormone - once a week in ampoules (Somatotropin) - "otherwise it will not grow." Ultrasound of the thyroid gland is normal. The hormonal profile is normal.

At the reception, she was examined neurologically. No complaints. Signs

there is no organic damage to the nervous system. When interviewed, a history of craniocerebral trauma without loss of consciousness 03.11. 2001 Since that time, the head hurts, gets tired, especially in the evening. She studies in two schools.

The attitude towards BRT is wary, rather negative. Parents are physicists. Conducted a conversation, the patient was examined by the ART method. The presence of HPN (on the thyroid and parathyroid glands), radioactive and electromagnetic loads were determined. False polarity on the thyroid gland. Preparations are prepared, the dose is determined. An electronic copy of the somatotropin from the drug selector is recommended (it is more economically profitable than in the form of injections: the cost of 1 ampoule is 2 thousand rubles, in total you need 4-5 ampoules per month, there is no guarantee that it will help).

The deficiency of vitamins, microelements (Zinc, Calcium) was determined, their deficiency was compensated. In the course of treatment, we used induction program No. 7 "Children's" - it turned out to be effective in testing. A study of the state of the endocrine system was carried out, in which the "tension of the 3rd degree", associated with the thyroid gland, was revealed. The preparations were prepared, the bioresonance therapy was carried out, the "tension" was removed. When testing helminths, *Fasciola hepatica* was found. To solve this problem, resonant frequency therapy was used (programs F135-137, intensity 100 conventional units). As a result of treatment, a month later, her height increased by 1.5 cm. The headaches disappeared, the girl became more energetic, more cheerful. Now the height is 154 cm instead of 130 cm. The difference with my sister is no longer 10 cm, but 3 cm. The menstrual cycle began earlier than that of my sister. Everyone is happy with the achieved result. Endocrinologist and pediatrician too, but they don't believe everything. During the treatment, for some time, at the initiative of the parents, a break was made and the drugs were not used. The result was not slow to affect - the growth stopped, it became obvious that the treatment could not be stopped. The treatment was continued - the growth increased again by 1.5 cm per month. The result is the result.

3. Patients with endocrine pathology in menopause: "hot flashes - feeling fever, "poor sleep, irritability, fluctuations in blood pressure, and so on. You don't need to write about this, since this is not a difficult problem for multiresonant therapy - all symptoms quickly "go away". At the same time, it is a long and painstaking work for neuropathologists of polyclinics and hospitals - they have to use numerous schemes, different medications in order to get the desired result and improve the health of patients.

It is somewhat more difficult to work with diseases such as uterine myoma (intramural, subserous, submucous), mastopathy (fibrous, cystic or fibrocystic), nodes or cysts in the thyroid gland. Having drawn up a treatment plan and implemented it, we get good results, the problem "goes away", but not as quickly as functional climacteric manifestations. We apply the schemes recommended in the IMEDIS Center. First, we remove the loads (GPN, EMN, radioactive, etc.), determine the presence of false polarity, interference fields, eliminate them. We create general and private BR drugs, frequent drugs. During treatment, induction programs were used (determining the need for each program during testing). When we receive confirmation of the treatment results based on the ultrasound results (the absence of a problem that has existed for many years),

doctor). This, too, is multi-resonance therapy.

4. Two patients of different sex and age, as an example (although such there are many patients): patient S., 22 years old (Chita) and patient A, 56 years old (Saratov). These patients have different diagnoses, but there is a common one - genital warts. According to the patient: the gynecologists explained that "it cannot be treated, it is necessary to strengthen the body, you can do moxibustion." The drugs were prescribed for the main problem (the patient did not report the existence of genital warts at the first admission): general BR-drug 1 globule 1 time, frequency drug 6.2 Hz, eliminating HPN, 1 globule 4 times, "anti-radioactive" drug from IMEDIS »1 globule 4 times, RUS 6 1 globule 3 times, Traumeel 1 globule 3 times. To the surprise of the patient and ours, the warts disappeared on the second day.

Patient A., 56 years old. He was unsuccessfully treated by dermatovenereologists for genital warts. They did, among other things, "moxibustion", after which the condylomas appeared again. Our therapy this time gave a positive result already on the third day. Were used: general BR-drug, frequency drug 6.2 Hz, 1 globule 4 times, anti-radioactive drug company "IMEDIS" 1 globule 4 times, RFT according to tested programs (F223-232) Warts. Different treatment, but the result is the same - the problem that had existed for many years disappeared.

5. Patient S., 22 years old (Chita). The treatment is currently ongoing. Preliminary results may be useful to clinicians of various specialties. I applied with almost no complaints. I recently got married. I decided to just check on the advice of a friend. From the anamnesis it was found that in childhood "there were some problems with the Mantoux reaction." No phthisiatricians were observed. Surgeons recommended the operation a year ago, since 1996-97. - osteomyelitis of the right lower leg. Periodically, the pain in the leg intensifies, "small bones come out, fester". She did not say anything about genital warts, tk. considered it incurable and had already turned to the gynecologist (see above). The treatment was started and on the second day the warts did not become, that is, what was concomitant and what was not emphasized disappeared. She noted a significant improvement in general condition - a surge of strength, cheerfulness. At the first admission, the following was prescribed: general BR-drug 1 globule 1 time, frequency drug 6.2 Hz, eliminating HPN, 1 globule 4 times, anti-radioactive drug of the firm "IMEDIS" 1 globule 4 times, RUS 6 1 globule 3 times, Traumeel 1 globule 3 times. With such a treatment regimen, what had existed for years - condylomas - disappeared. It should be noted that the general BR drug changes the course of the disease for the better. However, it is also an excellent drainage agent. However, what turned out to be unexpected - during testing, a positive response to the incidence of tuberculosis was obtained F500-542. Resonance-frequency therapy was carried out at an intensity of 100 services. units, a total of 7 sessions were carried out. A frequency drug has been prepared with a prescription for crumbs to be taken at home. The pain in the lower leg is gone, there is no "bone discharge". This is food for thought. We continue the observation.

6. October 2003 Unknown. Unconscious. It looks 20-25 years old. Around people are waiting for an ambulance. Coma (as a neurologist, I understand this): does not react to the environment, pupils are wide, there is no reaction to light.

Raised upward limbs fall, "like a whip." Pulse threadlike, barely palpable. Skin color is bluish. What actions? Bioresonance therapy (without inductors) in automatic mode along all meridians, the effect is remotely directed at the patient. One time impact on the reanimation point of ren-chzhong with the stimulating method. (at this time, work continues in automatic mode). After 3-5 minutes, the skin color changed. The pulse is better. It is no longer a coma, but a stupor, i.e. there was an elementary reaction to the environment, when trying to check the reaction of the pupils, he squeezes his eyes shut, resisting examination. On loud, repeated questions: "Your name?", "What is your name?", She called her name.

In this example, positive dynamics was obtained in a critical condition, which is a coma, without medications and examinations. The arrived ambulance team continued the work begun. The patient was already reacting, although elementary, to the environment. At first, there was general cerebral symptoms against the background of acute cardiovascular failure, which arose as a result of poisoning (it could be Clonidine, some kind of drug). Getting the patient out of the critical condition is the task that was accomplished with the help of bioresonance therapy without medication, examinations, in a short time, practically in the field.

7. Women diagnosed with Amenorrhea. In all cases of treatment received positive result. Treatment is always carried out under the supervision of a gynecologist, laboratory control is applied. In case of "secondary amenorrhea", the treatment regimens are known and do not raise questions; "primary amenorrhea" is a completely different matter. Difficult, but this task is doable. It should be emphasized that each case of primary amenorrhea is unique in its own way and requires specific, individual treatment. There is no single scheme. One thing is developmental defects (absence of the vagina or uterus, ovarian defect), then the help of a surgeon is needed, including reconstructive surgery. It is completely different when there are no physical defects. In these cases, our diagnostics and multiresonant scratching help.

Example. Patient, 18 years old. I applied on 11.06.2004 due to the lack of "independent" menstruation. From the anamnesis, it was found that, on the recommendation of a gynecologist, she has been on hormonal treatment for several years (microfollin, progesterone, trimersi, ligvenol, gonadotropin, and so on). Ultrasound of the uterus from 13.05.04: size 48 31 41 (it was also 41 27 40), position - in anteflexio. Ovaries: right - 26 24, small cysts, left - 22 16. Thyroid gland - diffuse increase of 1-2 tbsp. Ultrasound of the mammary glands from 06.21.04: signs of moderate cystic mastopathy. At the first dose, the hormones were canceled. Diagnostics was performed using the ART method. The presence of HPN, load on the thyroid gland, mammary glands, uterus, false polarity, radioactive, electromagnetic loads were determined, drugs were prescribed to eliminate the detected loads. A positive answer was received for the test "Primary amenorrhea". At the next appointment, the state of the immune, endocrine systems was determined, the tension of 2 tbsp was determined. (thyroid gland), depletion of 4 tbsp. (ovaries). Through exhaustion, hormones were determined, a preparation was prepared along the "interested" meridians. The organs involved in hormonal activity were diagnosed, starting from the "upper link"

- Central nervous system, hypothalamus, pituitary gland, parathyroid glands, thyroid gland, ovaries, etc. A preparation has been prepared to eliminate neuro-vegetative stress - "Bach Flowers" are very effective. When testing the "Pituitary gland" no positive answer was received, however, when working with the OP "anterior lobe", "posterior lobe", a reliable positive response was obtained to the latter. It became clear that it was necessary to restore the work of the pituitary gland (this, despite the fact that a thorough examination, including X-ray, MRI, in which the state of the pituitary gland was specifically examined) had been carried out earlier. Work has begun, including the use of drugs "Cycle Phases", induction programs No. 10 (Endocrine), No. 7 (Children's), No. 15 (Cerebral). Now independent menstruation has begun. We continue to monitor and work with our patient. What could have happened? Gynecologists recommended to our patient "taking hormones before pregnancy", there were no guarantees that later on "hormones would be canceled". We are planning ultrasound control and hormonal profile - in dynamics, against the background of our treatment.

8. Patient N., 33 years old. Diagnosis - lumbosacral radiculitis, protracted, recurrent course. Herniated disc L3-4. Severe pain syndrome. Was treated for 4 months. (including in a hospital setting). In connection with the lack of effect from the therapy, the question arose about the operation. On examination on 08/10/2003: severe pain syndrome with all positive symptoms of tension. There are also symptoms of loss - the Achilles reflex is reduced, hypesthesia in zone L3-4 on the pain side. Sits down with difficulty, prefers to stand. The patient underwent Zhen-chiu therapy: acupuncture, moxibustion. We used points on the ear, corporal Tszu - zones of pain projection), homeosiniatry (introduction into biologically active acupuncture points) of Heel Traumeel-compositum, Discus-compositum preparations. Tselkompozitum, ointments - Traumeel, Tsel. Cupping massage of the lumbosacral region. Sparing manual therapy was performed. Along with this, bioresonance therapy was used - combined treatment is more effective. In addition, a general BR-drug, private BR-drugs, "Antibol" from "ONOM" company were used 2 globules 3-4 times; Rus 6, 2 globules 3-4 times., Frequency therapy in the frequency range from 1.2 to 9.8 Hz using devices for magnetic therapy, at an intensity of 30 conv. units in the "swing" mode. The condition has improved. By the end of the month, the question of the operation was no longer raised. Works, feels good.

9. Several examples of the use of multiresonance therapy in diseases of animals (specializing as a neuropathologist) make it possible to re-evaluate this treatment, confirm its effectiveness and hope that it will find wide application in veterinary medicine. Moreover, excellent results were obtained with skin pathology (pustules on the skin, dull hair, warty formations in the upper lip) and with central lesions (in one case - cerebrovascular accident in a small dog, with a disorder of coordination and gait after a "battle" with a cat, in the other - behavioral disorders of the cat: aggression, anxiety of the animal - in the cat). Recovery occurs quickly without the use of medication. This is not psychotherapy, but treatment. Schemes, algorithms are taken those that are used for

treating a person. Used equipment for bioresonance therapy.

10. The above facts stated in the article "Cosmetology and multiresonance therapy ", are additional information in favor of practically drug-free elimination of complex problems existing in cosmetology (acne, hair loss or premature baldness," bad "nails, keloid scars, candidalomas, papillomas, knotted fingers). These are facts, this is what makes us once again wonder and believe in the existing reality, and this is the merit of bio- and multi-resonance therapy.

11. The case outlined below should force us to reconsider some generally accepted, established views in medicine, to give an opportunity to begin to use bio- and multiresonant therapy more widely, or, in any case, to reckon with it.

Patient L., 52, In her youth, she suffered from frequent headaches. Examined (there was no ultrasound at that time). The enlargement of the thyroid gland was determined. It is considered that this is the reason for these complaints. Operated (the first operation on the thyroid gland). The headaches did not go away. After 10 years, uterine fibroids were found. (By this time she got married, gave birth to a daughter.). Operated again. The uterus and ovaries were removed. Subsequent years worried about abundant vaginal discharge. She was consulted by leading specialists of the Research Institute of Obstetrics and Gynecology in Moscow. The operation was recommended and performed (already the 3rd) - the cervix was removed. The discharge decreased, but did not stop. Again a node in the thyroid gland. Another operation was planned. 10.04.99, the patient was at my appointment. The knot was removed - Zhen-Tszyu, Homeopathy, homeosiniatry - the introduction of native preparations of the "HEEL" company into the BAP. Reckeweg regressive vicarization was carried out. The operation was no longer necessary. The patient felt well. At another chance meeting in 2002, I invited her to a reception. The presence of geopathogenic, electromagnetic, radiation load was determined (by this time I was already familiar with Yu.V. Gotovsky, the staff of the IMEDIS Center, and unique equipment). The tactics in relation to the patient became clear. A treatment plan is outlined. However, the surgeon convinced the patient of the need for the next - fourth - operation, which was performed in 2003. By that time, increased headaches, "hot flashes", weakness, "surges" of blood pressure began to worry. At another chance meeting in 2002, I invited her to a reception. The presence of geopathogenic, electromagnetic, radiation load was determined (by this time I was already familiar with Yu.V. Gotovsky, the staff of the IMEDIS Center, and unique equipment). The tactics in relation to the patient became clear. A treatment plan is outlined. However, the surgeon convinced the patient of the need for the next - fourth - operation, which was performed in 2003. By that time, increased headaches, "hot flashes", weakness, "surges" of blood pressure began to worry. At another chance meeting in 2002, I invited her to a reception. The presence of geopathogenic, electromagnetic, radiation load was determined (by this time I was already familiar with Yu.V. Gotovsky, the staff of the IMEDIS Center, and unique equipment). The tactics in relation to the patient became clear. A treatment plan is outlined. However, the surgeon convinced the patient of the need for the next - fourth - operation, which was performed in 2003. By that time, increased headaches, "hot flashes", weakness, "surges" of blood pressure began to worry.

The same thyroid gland, in which a new node formed soon after the operation, brought the patient to me. This time the surgeon no longer recommended the operation. The patient was very worried about headaches, expressed weather dependence. Throw in a fever, blood pressure increased, joints ached, severe weakness. Examined in Moscow by a leading specialist in headaches, sleep problems, a renowned vegetative neurologist. MRI and other necessary studies were performed (no pathology was revealed). Treatment was carried out, but without effect.

The patient presented with the above complaints at 20.10. 2003 Diagnostics carried out. The drugs were prescribed according to the schemes that are offered already in the primary courses of study, they are described in detail in the "Materials

Conferences "(I am very grateful to the specialists who make reports, share their experience - these are my reference books).

What did the patient take? In all cases, total. BR-drug - "drug Yu.V. Gotovsky" (1 globule 1 time). It has a positive effect, stops deterioration, and is a good drainage agent. Against this background - a frequency drug 6.2 Hz, 1 globule 4 times, then 3 times, an anti-radioactive drug from the firm "IMEDIS" 2 globules 4 times. A preparation has been prepared that eliminates false polarity, and the dose has been determined. When tested through Rus, Konium, Psorium, a positive response was received. After clarification - what is it connected with, with which organ, and what is there? - preparations have been prepared, the dose has been determined. Induction programs No. 10 Stress III (Endocrine), No. 15 Cerebral, No. 22 Schumann waves were used, which were recorded on crumbs and prescribed 1-2 globules per day, in alternation according to the scheme.

The patient underwent homeosiniatry - the introduction of Cerebrum composite. in biologically active points of the head No. 10, 2.2 ml in 1-2-3 days. A preparation has been prepared for the correction of the endocrine system (through exhaustion). For the normalization of neuropsychic activity, the drug Bach Flowers was prescribed daily according to the "interested meridians", the dose and frequency of administration were specified.

Two months later, the patient disappeared from the above complaints. Her words of gratitude: "You can't imagine! The head does not hurt at all. I do not feel the change in the weather, there are no tides. A lot of strength, energy. Joints don't hurt. " We continue to work with the patient. What has been achieved is the merit of bio- and multi-resonance therapy. Perhaps the description of this case will make one think about operations, their necessity, urgency, and about the place of bio- and multiresonance therapy in the treatment of such patients.

There are a great many examples of recovery or significant improvement in seemingly hopeless situations, the list could be continued endlessly. So now my mother called and told the good news - her 5-year-old son has significant positive changes, the urologists removed the question of surgery, but she was supposed to be (there was a "cyst" of the testicle and spermatic cord - "dropsy"? And so on ...). More on that later - we hope for a full recovery.

Conclusions:

1. Bio- and multiresonance therapy are effective for diseases, seemingly hopeless. If possible, questions about surgical intervention should not always be urgently resolved.
2. Bio- and multiresonance therapy can be used as monotherapy or in combination with other traditional methods (Zhen-chiu, homeopathy, homeosiniatry), complementing them, making them more effective.
3. Diagnostics by the ART method is accurate, sometimes supplements, clarifies existing techniques. Often it is the only method for determining the disease.
4. Bio- and multi-resonance therapy are effective in treating animals.

5. The effect of bio- and multiresonance therapy is manifested in chronic and extremely acute pathology. There is a real prospect for the widespread use of bio- and multiresonance therapy in intensive care, hospitals, clinics, in the field.

Deryabina N.K. The place of bio- and multi-resonance therapy in health restoration (facts that make you think) // XI

"IMEDIS ", 2005, vol. 2 -

P.74-86
