

An example of treatment for alopecia areata

Skoroumova M.G.

(LLC "Center for Energy Information Medicine", Samara, Russia)

Patient O., 20 years old. She turned to CEIM on 05.08.04 with complaints of severe hair loss on the head locally and diffusely for 4 months, acne on the face. Was treated by a dermatologist - no effect. When viewed in the parietal region, alopecia areata - an area with a diameter of 7 cm, pronounced acne of the facial skin, asthenia. An examination was carried out using the method of vegetative resonance test (ART), as a result of which it was revealed:

- severe endocrine disorders;
- cystic processes in the ovaries and thyroid gland;
- the average degree of depletion of the immune system;
- intestinal dysbiosis;
- burdening with molds (including trichophyton rubrum),
bacterial and parasitic burden;
- an indication of the lack of trace elements;
- the presence of chronic foci of infection (palatine tonsils),
intoxication with oil products.

Therapy:

1. A course of treatment with BRT (general and specific BR-drugs, selected through the optimal step along the RA).
2. The course of resonance frequency therapy (antifungal, antibacterial, anthelmintic).
3. Treatment with drainage homeopathic medicines (OHOM, FM-complexes).
4. Nosodotherapy.
5. Seroimmunes.
6. Diet therapy.
7. Probiotic therapy.
8. Vitamin and mineral complex.

As a result of the treatment, the skin was cleansed, the hairline was completely restored, hair loss was within normal limits.
