

An example of a treatment for hepatitis

E.V. Pechenina

(LLC "Center for Energy Information Medicine", Samara, Russia)

Patient R. turned to "TSEIM" on 11.08.2004 with complaints of severity and stitching pain in the right hypochondrium, lethargy, drowsiness, irritability, flatulence. According to the results of ultrasound: chronic acalculous cholecystitis, an increase in the size of the liver. According to the patient, he abused alcohol for 8 years, was treated for the last 3 years by a gastroenterologist for viral hepatitis B, chronic cholecystitis, the treatment does not bring any effect.

Diagnostics by ART tests hepatitis, cholecystitis, chronic colitis, prostatitis, hemorrhoids, hepatitis B and D viruses, the presence of parasitic and fungal burden.

Therapy:

1. Treatment with frequent and general BR-drugs (through the optimal step of adaptation reserves).

2. Therapy fixed frequencies (antiparasitic and antifungal).

3. Treatment with nosodes in conjunction with a complex of drainage preparations firm "ONOM".

After the treatment, the severity and stitching pains in the right hypochondrium subsided, a calm attitude towards others was noted, an increase in libido, and sleep returned to normal. According to ultrasound from 12/18/2004: liver of normal size, indirect signs of cholecystitis. In the blood, the hepatitis B virus and antibodies to the virus are not detected by immunoblotting. On control, hepatitis B and D viruses are not tested.
