

Restoring the structure of water in the internal environment of the body, as a way
optimization of the treatment and diagnostic process

"Water - you are life itself!"
A. Exupery.

Water is the basic medium of the body, on which the efficiency of all biophysical processes, biochemical reactions and the structural and tissue organization of organs depends. Controlling and regulating information flows are transmitted through water, receptive receptor systems contain water molecules and are structurally formed by the surrounding water environment. The main recommendation that unites all medical and health-improving methods is an adequate drinking regime.

However, research by scientists from different countries (Emoto Masaru in Japan [1], C.V. Zenin et al. In Russia and others) show that the structural state of liquids under the single name "water" can be so different that to talk about the identity of their impact on the human body, to the lesser extent, is incorrect. Massive groundwater pollution dictates the need for an increasingly complex and multi-stage system cleaning. Passing through the water supply system, water is exposed to various factors (pressure, admixtures of metal pipes, electromagnetic fields natural and artificial origin, etc.) so that as a result, it loses the information contained in it initially for structuring the morphogenetic field of living organisms. Water, acquiring chemically and bacteriologically perfect composition, becomes "dead" water, loses the ability to receive, memorize and transfer information.

Water in the internal environment of the body is represented exclusively by structured water. The use of "dead" water leads to large losses of energy for its organization, and when these processes are disturbed, such water forms biochemically inert macromolecules, which leads to the formation of a state of hypo- and non-reactivity of the body's tissue systems. Recent studies have revealed that an isotopic type of water - heavy water (D₂O) - is formed and accumulated in the human body. Moreover, the amount of accumulated heavy water in the tissues is directly proportional to the degree of damage to this tissue. The solubility of most substances in heavy water is significantly less than in ordinary water. Heavy water slows down biological processes in living organisms and leads to their sharp aging.

N. Kempe reported to us about the extremely great importance of using structured water in testing for ART and in treatment with BRT back in 1999 [2]. She noted that before conducting a study, they give patients (all without exception) a glass of "good energized water" to drink. And in 1998 we were presented with a report on the use of activated silicon water as a natural non-drug therapeutic and prophylactic agent [3]. The above works, valuable and very interesting information received from the programs of the series "Theory of improbability" about the structural and energy-informational properties of water, prompted us to

research treatment and diagnostic properties various species
structured waters, as well as the diagnostic capabilities of the drug "heavy water".

The simplest and relatively accessible water with natural energy-informational properties is spring water, but practice has shown that not every spring water has pronounced biological properties. Holy water is available and highly effective. But for some reason, it does not manifest its properties in every patient. The most convenient, affordable and effective was the water treated with the devices of the Austrian naturalist Alois Gruber - EWO.

It was found that the use of energized water before the start of the diagnostic and therapy session significantly increases the diagnostic accuracy: general harmonization allows you to remove from the field of vision the processes that the body is able to cope with by increasing the activity of the self-regulation system, and the most important processes that require priority intervention are more visible. clearly. The BR drugs created against this background work much more actively. The use of energized water immediately improved the main indicators of ART as follows: OBI (only high ones were taken into account) - by 2-3 points; OFI - by 4-8 points; OPA - 2-4 steps.

Attention is drawn to the fact that structured water primarily improves the photon indices, i.e. it contributes to the restoration of intercellular communication, which in itself can become a leading factor in the activation of self-regulation processes. The degree of improvement in photon indices is a reliable criterion for assessing the biological activity of the water under study. However, a survey of people taking energized water for a long time showed that if its use is started in a state of relative harmony of the body, it fully manifests its properties and contributes to the preservation of human health. But if a person with chronic pathology begins to use such water, then the deeper the pathological process, the less any structured water shows its creative properties. Overcome obstacles

bioresonance therapy with structured water for exercise. Such a session has a pronounced detoxification, drainage and general harmonizing action. BR-drug, recorded according to the second strategy, often turned out to be the only highly effective therapeutic agent.

The drug "heavy water" is quite informative diagnosticum of the degree of organ damage. The more potencies of "heavy water" are tested through an organ, the higher their absolute values, the more this organ is damaged, the more destructive processes occur in it. A complete correlation was established between the test results between the drug "heavy water" and Molybdaenum met. D800, i.e. in practically healthy people there is no effect of lowering the measuring level when both drugs are presented. The ability to potentiate the drug "heavy water" for diagnostic purposes allows one to identify those problems that are not visible through basic diagnostics. The drug "heavy water" cannot be regarded as a nosode, but

therefore, it cannot be applied to the load (from our point of view), it should be used in treatment only in inverse form.

The synthesis of two directions of water research has logically developed into a very effective methodology, which now begins the treatment and diagnostic session: after eliminating external interference fields and fixing the optimal baseline indicators, in automatic mode, BRT with "heavy water" in inversion and with structured water in the load, we carry out a session of therapy until the growth of the general reserves of adaptation stops.

If their level began to correspond to the optimal one, we write down the BR preparation and, if necessary, we work with particular problems, controlling the preservation of the optimum. By creating private BR drugs, in the load additionally we put structured water. It is extremely important that the patient drinks a sufficient amount of energized water during the treatment. It was also noticed that the use of such water by a doctor significantly increases his sensitivity, which, in turn, has a positive effect on the results of work. And at the same time, its resistance to negative energy-informational influences from sick people increases.

The role of water in human life is much greater than we can imagine. Water is a universal medicine: what could be more natural? Choose the type of structured "living" water available to you, make it your food, your medicine, come up with new methods of treatment - this is a win-win path, only victories await us on it.
