Aging is the most widespread type of immunodeficiency, which has a complex psychoneuroendocrine effect. The formulated theory of neuroendocrine immunogenesis led to the search for effective prophylactic agents, as well as methods of antiaging therapy and correction of somatic pathology. The theory of water as a carrier of information indicates that information does not depend on spatio-temporal structures and the most elegant method of transmitting information in our time is electromagnetic oscillations, which is used in bioresonance therapy.

Purpose of the study - evaluation of the effectiveness of therapy Five elements:

- 1) impact on the acupuncture point or reflex zone;
- 2) with the injection of Heel GmbX antihomotoxic drugs into the area reflexology points;
- 3) bioresonance therapy itself;
- 4) change in microcirculation in the body and use of the mechanism homeopathizing naturopathic remedies (VARIMED, SHOYNEAR, HEEL);

5) the impact of structured water, information component which changes as a result of the increase in the cognitive level of the doctor.

The work was carried out during 2002-2006. with a group of 543 people aged 30 to 82 years.

Results: there was a pronounced efficiency in the restoration and harmonization of the interhemispheric asymmetry of the brain - the left one, which is responsible for maintaining the anabolic reaction in relation to the right hemisphere, which is responsible for catabolic processes.

Comparison of the severity of clinical signs during observation showed a reduction in psychovegetative symptoms.

Harmonization of energy balance, endocrine and immune systems was verified by performing segmental bioelectronic diagnostics and vegetative resonance test.

In viral infections, the efficacy criterion was the disappearance of specific IgM in the blood and a decrease in the titer of specific IgG.

Summary: a study of neuroendocrine immunological the effect of antiaging therapy has become the next stage in the study and experimental confirmation of therapeutic of the above Five Elements. work on properties
