

Infertility treatment. Case from practice  
L.P. Fedotova, N.A. Fedotov  
(Krasnodar, Russia)

At seminars on BRT, our Teacher - Yu.V. Gotovsky called on us many times: share the experience that you have. If you succeed in something, tell your colleagues about it, you can't let your knowledge go with you.

We want to tell you about one case of infertility treatment from our practice. Perhaps, for experienced colleagues who have been involved in multiresonance and bioresonance therapy for a long time, there is nothing unusual here. But new specialists are constantly joining our ranks, who find it difficult to determine where to start therapy when there are so many problems in the body. We think they will be interested in this case.

Two years ago, young spouses N., 27 and 25 years old, turned to us for help. Three years of marriage, no pregnancy. During examination in a clinical laboratory, the husband revealed a reduced number of cells in the spermogram, their low mobility. As a child, he suffered from chickenpox, frequent colds, sinusitis. The adult was worried about headaches, asthenia. Several years ago, both spouses treated a genitourinary infection: ureaplasma, Trichomonas. In my wife, gynecologists suggested the presence of a cyst in the left mammary gland, in question - in the ovary, but in general they said that she could have children, however, treatment for 2 years did not give results. The examination and treatment were carried out on the equipment of the Center "IMEDIS", we used the autonomous "MINI-EXPERT-DT" and "IMEDIS-BRT-A". Diagnostics by the method of vegetative resonance test showed the following:

1. Husband: BI - 10/12, OBI - 8, RA - medium 3 degrees, psycho-vegetative load of 1 degree. Acquired and hereditary intoxication is tested, through Intox II - viral, allergic, mycotic burden. Revealed electromagnetic and radioactive loads. The target organ of electromagnetic burden is the hypothalamus, left epididymis, prostate, ureter. The target organ of radioactive burden is the prostate. Depletion of the immune system is caused by the Cocksackie virus, in potency D15, D30. It is found in the same organs of the genitourinary system that have become a target for electromagnetic burden, as well as in five structures of the brain. Nosodes are tested: cystic processes in the prostate, chronic prostatitis. Chakras 1 and 2 are blocked. According to the Astromed computer program, the core of the patient's pathology from birth is the bladder meridian, which was confirmed by the results of ART.

2. Wife: BI - 12/14/18, OBI - 11, RA - low 2 degrees. Discovered electromagnetic and psycho-vegetative load of the 2nd degree, the ovaries are the target organ of both loads. They are the most affected organ. Acquired toxic information was found, through Intox II bacterial, viral, mycotic, allergic burden, expressed dysbacteriosis are tested. Mushrooms: mycosis oris, candida krusei, mycot. fluor. Viruses: herpes, adenovirus. Adenovirus affected the mammary glands and ovaries, candidiasis - the ovaries. Triggered the Conium D30 test pointer on the ovaries, Rhus tox. D60 - left parameter, left mammary gland. The patient turned out to have a weak energy. Violations in the seven meridians were revealed, the key also turned out to be

meridian of the bladder (in deficiency). Blockade of 1, 2, 3 chakras. In addition, three blocks of the mesenchyme were identified in a young woman: blockade of 2 sublayer of the first layer, 1 sublayer of the second layer, and blockade of 4 sublayer of the 3rd layer of mesenchyme. She complained of poor bowel function, she was troubled by constipation since childhood, was characterized by emotional lability, increased impressionability.

As can be seen from the primary data, spouses have enough problems that prevent them from becoming happy parents. The husband was found not only electromagnetic, but also radioactive burden. He lives in an area where, in general, the total radioactive background does not go beyond the normal range. But his immune and endocrine systems were depleted, and the body's reaction to a negative external background was exactly this: the radioactive load struck the prostate.

In the spouses, the reproductive system turned out to be the weakest link in the body, that is, the locus minoris resistentia. It was these bodies that got the most.

We started the therapy with the elimination of all loads. The spouses underwent resonance-frequency therapy of 6.2 Hz in deviation mode, this frequency was recorded on homeopathic crumbs. Since the professional activity of our patients is constantly connected with computers, the inversion of electromagnetic oscillations of monitors from their workplaces was prepared. In addition, the energy balance was restored at the beginning of the treatment. According to the method of A.A. Hovsepyan made bioresonance preparations to restore the energy of the element of "water" on the endocrine meridian of the wife and the element of "fire" on the meridian of the bladder of the husband. Also, according to the method of A.A. Hovsepyan's mesenchyme blockade was lifted. The key for the woman turned out to be block 4 of the sublayer of the third layer of the mesenchyme at the frequencies of the bladder meridian. She was made a BR-2 to solve this problem. At the end of the treatment session, the chakra blockade was removed according to the method of L.A. Frolova and S.A. Kazakov, prescribed homeopathic chakra, drainage and detoxification preparations. Psychocorrectional work was carried out.

Two weeks later, the spouses were not tested for electromagnetic and radioactive loads. The integrative indices improved, the husband's reserves of adaptation increased to good grade 3, the wife's - to the average grade 2, her psycho-vegetative loads decreased, the third index was not tested. Both noted high efficiency, activity, good mood. The elimination of the Coxsackie virus in tested potencies was started for the husband. The BR-therapy strategy was chosen depending on the state of the immune system with the manufacture of general and specific bioresonance drugs. Zhenya underwent bioresonance therapy to solve gynecological problems. The conium in inversion was chosen as the key nosode with the therapy of those meridians on which it was tested, and the OBR and BNR were prescribed.

Two months after the first meeting, the couple announced the onset of pregnancy. He had only three treatment sessions, we simply did not have time to eliminate many health problems in young people. After that, my husband continued antiviral therapy. All previous medications were canceled for Zhenya, she underwent basic bioresonance therapy in a sequential circular automatic mode, fixation time - 1 s, transmission coefficient

- 7. The therapy was carried out with a Cu met load. D400 in order to prevent a breakdown of the adaptation reserves. At the end, the therapy was carried out in manual mode on the key meridian, which is in short supply. In the last 180 seconds when recording harmonic vibrations Cu met. The D400 was retracted.

The onset of toxicosis was hard to bear, and she dramatically lost weight. Gentle drainage agents were selected for the patient, and the diet was adjusted. She was recommended a psychotherapeutic technique - to talk about toxicosis with the fetus in order to relieve emotional stress and negative perceptions from the onset of pregnancy. Such sincere conversations helped, the emotional state became more stable, toxicosis became easier to endure. We mentioned that our patient is an emotionally labile woman. She worked in a large company, where some kind of production problems often arose. They worried, created additional stress for her and the fetus. It was also suggested to discuss these problems with the baby. Pronouncing the traumatic problem aloud made it possible to find an adequate solution without excessive dramatization of the situation. To a child in the womb they constantly repeated how they loved him and expected him to appear on time. The husband was also involved in such communication. According to foreign scientists, communication with the fetus in the womb is of great importance for the development of the child, the formation of his future intelligence.

Throughout her pregnancy, we kept her in an optimistic mood. She learned to calmly relate to the results of examination by a gynecologist in an antenatal clinic, where they often tried to intimidate her with possible negative consequences. We noted above that the patient suffered from constipation since childhood, which could cause additional intoxication of the fetus. We carefully selected the nutrition so that the woman's intestines function normally, constantly monitored the balance of trace elements and vitamins in the body. All allopathic drugs prescribed by the gynecologist, as well as BR-drugs, drainage aids were tested for ART for tolerance and effectiveness, the dosage was adjusted, if necessary, the frequency of administration was determined mentally. All drugs were tested against a consensus prescription.

The pregnancy was successful. Treatment sessions were carried out once a month. The entire period of pregnancy, until the patient went on maternity leave, she took the drug "anti-computer" at the beginning and at the end of work, so that electromagnetic burden did not appear. He was avoided psycho-vegetative loads were kept at the level of 1 c.u. From the 36th week of pregnancy, she was given the drug of the freema "GUNA" "Happy Motherhood" and from the 37th week the drug from the company "GUNA" "Calm Childbirth" was prescribed. Our patient gave birth to a son on time, from the first day she had a sufficient amount of milk. Now the baby is 1 year 4 months old, he is healthy, calm, developing well.

After treatment with her husband: RA is good 3 degrees, BI - 9/10. There is no electromagnetic, radioactive, psychovegetative burden, the Coxsackie virus is not tested, the headaches are gone. He gained weight, became much more energetic. Those gynecological problems that we did not manage to solve with my wife in connection with pregnancy, we are eliminating now, when the baby has grown up and began to be left without a mother with relatives.

The positive result of the work carried out on the treatment of the described case, as well as many years of experience in the rehabilitation of patients with complex pathology, allows us to determine the priority tasks and the sequence of therapy:

1. The need to eliminate all types of loads: geopathogenic, electromagnetic, radioactive, psychovegetative, elimination of false polarity, mesenchyme blockade.
2. When energy disturbance in a patient, it is necessary to restore the energetic balance of the body in accordance with the relationships SYN. After according to the law of Elimination of the above loads, restoration energy balance, normalization of polarity, removal of blocks, there is a positive trend on the part of somatic pathology. Patients' well-being significantly improves, the body is ready to fight the disease.
3. When choosing a treatment strategy, one must proceed from the state of the immune, endocrine systems of the patient's body, take into account his age, the presence of severe chronic, degenerative diseases, his ability to withstand loads with a large release of toxins, so as not to "disrupt" the reserves of adaptation, not to cause exacerbation. Drainage and detoxification therapy is required here.
4. Treatment of any somatic pathology should be accompanied by psychotherapy, the formation of positive thinking in the patient, his belief in the success of treatment. The patient needs psycho-correction of his own personality, he should be taught to adequately respond to problem situations in order to avoid further psychosomatization of diseases.
