

Where to start?  
O.G. Smirnova  
(Minsk, Belarus)

Yu.V. Gotovsky said that in treatment one should follow the principle "from the general to the particular." What is the most common thing in a system called "man"? Of course, there is a control system (control functional system - UFS), which unites systems and organs into a single organism and produces certain control signals (CS), which become ineffective in the "chronic patient" system. Our task, by acting on the body in some way, is to promote the emergence of an EOS capable of solving the presented problems. Such a new, corrected, more effective US will become the very remedy capable of gradually and step by step to restore all blocked programs of our self-realization. This drug takes on the character of a vaccination. The body becomes resistant and immune to this problem. Techniques that create such drugs

The most common problems of the body, which should be addressed in the first place, are a variety of physical and mental stress, which are so many in our technogenic age and which aggravate the condition of both individual affected organs and systems, and the whole organism as a whole. The inability of the UFS to eliminate these loads is one of the reasons the occurrence of chronic diseases.

The author's proposed method of eliminating physical activity: geopathogenic (GN), radioactive (PH) and electromagnetic (EN), is carried out on the equipment of the firm "IMEDIS" according to the methods of XST, Response 3 and BRKUS and is, in fact, an inoculation, with the help of which resistance to these loads develops. We collect tasks that we will present to the body for solving:

1. An energy-informational preparation recorded on transfer from pieces of foil, which were for 3 hours under the influence of geomagnetic radiation of the Hartmann grid lines (CX): horizontal, vertical and poles. Inverting the drug, we select the main signal, which, as it turned out, eliminates the burdens of not only the CX, but also the Curry nets. Now you need to bring the drug into a state of conformity with the system, that is, make it recognizable for the body, and therefore systemic. To do this, we adapt it to KMX: iCX / KMX

Geomagnetic lines cover the entire Earth with grids, and we often fall under their harmful influence, but they are not afraid of the "grafted" organism. It easily removes any effects of geomagnetic radiation. After treatment, patients continue to be exposed to CX in places of sleep and work without renewal of GN.

2. To eliminate PH, we use the inverse nosode of the chakras, created by the method of A.E. Kudaev and adapt it to KMH: iN chakras / KMH  
Already during virtual testing with a load of this drug, the pH is no longer determined.
3. Electromagnetic radiation is omnipresent, they permeate us constantly

and at home, and at work, and in transport. What is the cost of mobile communication alone, and computers, and television? The list can be very long. It is all the more important to make the body resistant to EM radiation so that we can safely enjoy progress. As an initial EM signal, we take the radiation of a mobile phone and a computer, recorded on foil for at least 20 minutes. Inversion of the signal allows you to isolate something common for EM radiation of different origins and instill in the body resistance to the entire EM spectrum. After adaptation to KMX we get: iN phone and PC / KMX

4. It has long been known about both therapeutic and negative effects on the body. precious and semi-precious stones and metals. And therefore, if there are any in patients, we collect them together, which we place in foil for 20-30 minutes. Then, in the same way, we prepare the following task: iN jewelry / KMX;

5. If one session is enough to eliminate physical activity therapy, then mental stress has to be dealt with at each stage, gradually reducing their intensity. In this technique, we use all together or separately the following drugs:

- systemic spiritual adaptants (SDA). For the first time, we usually restrict ourselves to the Life-giving Cross and Nicholas the Wonderworker, and in the future we use the amount of the SDA;
- the sum of Bach colors, adapted to KMH: CB / KMH;
- inverse psychoemotional nosode according to A.E. Kudaev: iPEN / KMH.

6. To eliminate the false polarity that is present in the chronicles almost always, we include amino acids in the complex of tasks, as a rule, the sum of all tested AA. This is usually sufficient to close the false polarity problem.

7. If at this stage there is a HST, then to the already recruited complex of tasks you can add enzymes.

8. There is one more very important marker - this is the ingenious creation of A.E. Kudaeva, K.N. Mkhitaryan and N.K. Khodareva - KMH. With its help you can:

- check any group of tested drugs, how important they are for the body;
- check finished products for compatibility, efficacy and tolerance, since KMH covers all environmental tests;
- determine the dosage of the drug;
- use as a filter to identify virtual, or rather, hidden problems.

And if KMH is information about the problems of the body, then why don't we use it for treatment, as we do with all other problems. Indeed, according to the homeopathic principle, everything that harms us, "loads" and burdens us, then heals us. Let's do with the KMH, as with other loads. Let's select the main signal by inverting the KMX and adapt it to the KMX.

We get a new task: iKMX / KMX.

The author applies this technique only when the KMX is removed from one hand, which is determined mentally. After 2-3 sessions, the hand can change and only before the closure of the first constitutional layer is it mentally determined whether the CMH should be removed from both hands. From now on, no

it should be used for treatment, so as not to "gloss over" the possibility of using CMH as a marker for determining a constitutional homeopathic remedy (CGP).

9. When applying Response 3 or BRKUS to the complex of tasks, you can add inversion of the sum of OP and nosodes.

10. The author is a supporter of systemic multilevel therapy according to A.Ye. Kudayev and believes that the impact on the body at each stage should be carried out at all levels: physiological, psycho-emotional, event-related and spiritual. Therefore, an indispensable supplement will be life-saving drugs adapted to the KMH.

At this stage of collecting tasks ends and treatment begins, as a result of which the desired therapeutic drug appears.

I emphasize once again that the use of vaccination techniques is possible only after the elimination of acute and subacute phenomena with the help of drugs of the first level according to A.E. Kudaev.

The complex task of this level looks like this:

iKMX / KMX + iCX / KMX + iNchakra / KMX + iNMtelephon and PC / KMX + iNdrinks / KMX + CB / KMX + SDA + Destiny / KMX + AK + enzymes

For chronic patients without exacerbation at the first visit, the treatment was carried out according to the above method. The result has always been an optimization of indicators, an improvement in well-being, an increase in the therapy step.

Conclusions:

1. The drugs created using the XST, Response 3 and BRKUS are "Inoculated".

2. The use of "grafting" techniques to eliminate physical loads helps to eliminate them once and for all.
