

Algorithm of work on the device for bioresonance therapy of the company
"IMEDIS"
E.V. Lviv
(Moscow, Russia)

Everyone uses bioresonance therapy and R. Voll's method at the level that is available to him.

I have created a new approach to the treatment of BRT, but BAP measurements are carried out only by the method of R. Voll.

The new principle of treatment that I want to propose is unusual in that true treatment begins when the effect on the patient's body stops completely and the body begins to heal itself. This process is invisible, but by the way the symptoms disappear, I draw the conclusion that these changes inside are much more effective than after drug exposure. I call this true cure.

According to the stereotypical thinking, which is offered to us even in medical schools, the doctor must necessarily prescribe something to a sick person (pills, ointments, drops, suppositories, injections, etc.) in order to get out of the state of the disease. The rhythms of the "ebb-tide" type, previously identified in the body, were continued with further observation and research. But these changes in BAP are detected only against a background that excludes any violence - medication - on the body. When an allopathic or informational preparation is introduced into the outer contour, these changes are "erased". As practice shows, under the influence of external influences, the body increases the performance at the periphery, i.e. on the BAP of the upper and lower extremities, but this does not mean at all that positive dynamics is taking place in the organs. In short, the body protects itself from our influence, increasing the indicators, or removes some symptoms from the outside, but inside, - as the disease was, it remains. For example, removing redness, pain, swelling in the affected joint with ointments - this does not mean that medicine has saved a person from severe arthritis. In our medical ignorance, the number of chronic patients is growing, and our assumptions about deep positive shifts inside are our violent fantasies. Often the homeopathic essence of the drug is confused with the material component. For example, when testing microelements, they talk about a lack of calcium, iron, potassium, manganese, etc. It would be more correct to say that there is a disturbance in the exchange of calcium, iron, manganese, etc. in the body, since disturbances can be of the type of lack of some and an excess of others. and so it remains. For example, removing redness, pain, swelling in the affected joint with ointments - this does not mean that medicine has saved a person from severe arthritis. If at least one organ is blocked in the body, general treatment will not work. Working at one representative point, it is impossible to identify, in this case, measurements by R. Voll's method are simply necessary.

Often, the immune status is so suppressed by previous treatment that treatment must be carried out carefully and carefully, as D.E. Bocharov says. - "gingerbread"

STAGE 1

My first steps are definitely an inversion in order to weaken at least a small part of disharmonious or pathological vibrations. I always use Gi la

dextra et sinistra. This is an excretory organ, and when measured by R. Voll's method, it usually occupies one of the first places among the worst organs. Inversion of this BAP well synchronizes the work of organs, and the indicators begin to increase and level out, which has a beneficial effect on the patient's well-being, even some blockages may go away. The device for bioresonance therapy of the firm "IMEDIS" copes with this task. The resulting preparation eliminates toxins well, and no other drainage preparations are needed! On the following days, it is mandatory to take up to 2 liters of fluid a day, no later than 5-6 pm (to sleep at night), otherwise the blood stream transfers toxins from one place to another, significantly worsening, sometimes dramatically, the patient's condition, subsequently settling again in plexuses, mesenchyme, adipose tissue, in the spine, in the heart, in the dorsal,

STAGE 2

At the second stage of elimination of toxins, I use BAP VB 43 e dextra el sinistra, a favorite place for the localization of heavy metals and their salts. The liver is our chemical detox laboratory that tries to help the body within certain limits. Here are "stored" undegraded products of exo- and endotoxins. Paradise for inversion. Considering that the liver and gallbladder "shoot" at the heart, the role of inversion of the hepatic plexus in preventing the etiological factor of angina pectoris becomes clear.

But the meridian of the gallbladder also controls the joints, and inversion of its plexus is also very important in the treatment of arthritis of any etiology.

It is so interesting in the body that no matter what strategy and tactics the doctor uses (provided they are carried out correctly), the program for self-medication that was originally laid down in us always first of all removes problems from the brain and heart in the first sessions.

Never inverting the entire meridian.

STAGE 3

Sometimes, by the 3rd session, low indicators on the BAP of the heart meridian remain. Usually this is due to an undiagnosed pathology that was transferred in childhood or in adolescence, which has safely survived to this day. This situation implies an inversion at the 3rd stage from the cardiac plexus on the meridians C, TC, MS. Usually, each organ has one plexus on the right and left, and the heart (for safety reasons) has 5 plexuses:

cardiac plexus - C 8e;

stellate node located in the cervical ganglia - TC 1a; cardiac

plexus in the thoracic aorta - MC 8e; cardiac plexus in the

abdominal aorta - MC 8c; coronary plexus - MS 7a.

Practice shows that when the indicators on the BAP of the meridian C are below 13 cu. on the right and left, the doctor can confidently interpret this situation as a pre-infarction condition.

Example

In three patients aged 43, 52 and 33 years, according to R. Voll's method,

on the KTI of meridian C on the right and on the left, indicators are up to 13 c.u. The diagnosis is a pre-infarction condition. Strict home bed rest is recommended. But it's hard to believe that something serious can happen if you feel fine and they go to work. On the next day, all three are hospitalized by the ambulance in the intensive care unit with a diagnosis of myocardial infarction, one of them is in a coma.

STAGE 4

All subsequent stages pass without inversion, and the body is offered a tougher tactic such as "TREAT YOURSELF".

First, a little digression into history.

We know that when a child is born, he inherits not only similarities with his parents, but also all their diseases. And from whom do parents get illnesses? From your parents! And those from whom? From their parents. And so endlessly back. Considering that humanity on earth has existed for several million years, how many diseases are transmitted to each of us? A great multitude. And with our current level of knowledge, 10 lives are not enough to get rid of this baggage. Each disease that has been transferred, if it is not cured, occupies its own niche, its own level, layering on the previous one in the form of electromagnetic waves (everything that surrounds us and what is inside us - all waves in motion or vibrations - all the same). Our body is an excellent computer biosystem (but more complex), which remembers in a strictly defined sequence all the diseases we have suffered and does not "allow" us - doctors to "pull out the key" disease from a deeper level. We can only heal in reverse consistency, treating each previous disease. Long-time working follists know that seemingly cured gallbladder, liver, kidneys, etc., suddenly, in subsequent sessions, they again give us low BAP values, i.e. they are sick again. And for a long time I did not understand that this is a scrolling of previous, previously untreated diseases of these organs. And with low rates, the body asks us to treat this condition, then it will offer the previous disease for treatment. We still do not always understand the language of numbers that indicate to us a pathology, which is laid out strictly "on the shelves" inside.

Pathological electromagnetic oscillations are the less, the further the heir is, i.e. the amplitude and frequency are so small that our equipment simply cannot be captured. Voll on his apparatus could name the diseases that the ancestors had had 10-12 generations ago. I would like to wish the IMEDIS team to significantly increase this figure.

Since a doctor is not able to remove the baggage of hereditary diseases, it means that we cannot cure a person (any), but we can make him workable.

Preparing the body for self-medication, such as "TREAT YOURSELF", begins with endogenous bioresonance therapy.

In the 1st group of patients, the body can immediately give high BAP values, which means that the body still needs a separator, which cuts off pathological fluctuations. Another group of patients immediately gives low BAP values, and I suppose that the body immediately asks not to suppress it with any therapeutic effects. I am waiting for this moment, tk. in

In fact, a decrease in indicators shows the doctor a request to remove any effect on him: resonant, multiresonant, OP, color, nosodes, etc. The body wants to work on its own. What I am doing. I turn off the BRT and put it into MT-standby mode. Usually, within a few minutes, the body raises the indicators. And I continue to engage in "doing nothing", except for measurements according to R. Voll, and wait for further reactions from the body. The fun begins. Feeling the freedom given to him (no drugs in the external circuit), the body begins an independent internal work, invisible to the doctor, in search of the cause of his illness. Within 5-10, less often - 20 minutes, the body finds pathological fluctuations that need to be treated here and now. And the strength is not enough. Then, to solve the problem, energy is taken from the periphery:

Naturally, there are almost always blocked organs, meridians, whose indicators do not decrease. This is where the doctor's creative work begins. It is enough to dissipate the pathological energy on the associated meridians, often the organs not connected with it work, which means that the disorders are in the BH systems / miraculous meridians /. As soon as the indicator on the blocked organ / organs decreases, the body begins to self-medicate (if at least one organ is blocked, the general treatment will not work). In the next sessions, the previous deeper blocks are opened, but in a strict reverse sequence.

What is the body doing inside? Cleans, rearranges, sweeps out - we do not see, and therefore do not know. But the organism will never do a bad thing to itself. The work is carried out with the least energy consumption and with the greatest effect. The situation inside is different, so the time for eliminating problems is also different, from 30 minutes (this is the norm obtained experimentally) to one and a half and two hours.

In this case, BAP control is carried out only by the method of R. Voll.

Example

A patient, 82 years old, presented with suffocation and pain in the chest with irradiation to the left arm. When measuring BAP on the hands and feet, all indicators are not higher than \$ 20-25.

I am starting to carry out endogenous bioresonance therapy. The body does not respond to the therapy, as evidenced by the unchanging low indicators - the situation is very serious, and subjective complaints do not change: suffocates, speaks with difficulty - catches the air. I decide to transfer my body to independent work. I turn off the BRT. The device works only in the recording mode of the processes taking place inside. I start to wait - 1 hour, 1.5 hours, objectively and subjectively nothing changes. I can hardly restrain myself so as not to connect the BRT, not to give an informational preparation. All hope is for the body, which is 82 years old, and for the apparatus created by the IMEDIS Center. And suddenly, after 2 hours of waiting, the indicators on all BAPs "jump" to \$ 80. "Look," I tell her, "all indicators are 80". But she does not hear me, shouts: "It became easy for me to breathe!" And indicators, and breathing leveled off at the same time. 4 years have passed. She is now 86 years old. Not a single attack of suffocation, not a single attack of angina pectoris in 4 years. The organism did something itself. But what? It is not given to us to know. And the apparatus

I wrote everything down clearly. Thanks to the IMEDIS Center.

Conclusions:

1. Toxic and chemical substances entering the body, endotoxins initially affect the autonomic plexus of organs, which leads to steaming of the autonomic innervation of the organs, and this negatively affects their trophism, and conditions are created for the development of diseased organs. Radioactive substances, first of all, are deposited in the cardiac ganglia, and not in the thyroid gland, as many people mistakenly assume.
2. In the first 2-3 sessions, I must make an inversion with vegetative plexus This prepares the body for further treatment. (Inversion is not the main treatment.)
3. I always "catch" the rhythm of the ebb and flow. I start treatment with them.
4. BR-drug created on the apparatus of the company "IMEDIS" is an excellent natural drainage agent, created specifically and immediately similar to this patient.
4. The intervals between sessions are 1–1.5–2 months, with rare exceptions.
5. BAP control is carried out only by the method of R. Voll.
6. Never inverting the entire meridian.
7. Drinking liquid is obligatory daily up to 2 liters no later than 17-18 hours.
