

## Examples of successful treatment of "incurable" diseases using "IMEDIS"

S.N. Huseynov

(V. Aliyev clinic, Baku, Azerbaijan)

Complex treatment is carried out in our clinic. First, with the help of the IMEDIS equipment, the cause of most diseases is identified and destroyed - viruses, microbes, worms, fungi.

This allows, in many cases, to cure a variety of "incurable" diseases.

According to indications, we use various combinations of the following types of treatment: psychological mood, diet, bowel cleansing, tubage, clay treatment, yoga, ozone therapy, plasmapheresis, homotoxicology and classical homeopathy, visceral chiropractic, bee products, herbal medicine, manual therapy, hirudotherapy, etc.

Example 1. Patient A., 53 years old. Diagnosis: adenocarcinoma of the cervix. There are the results of histological and ultrasound studies. The patient is worried about spotting from the vagina for 2 months. She categorically refuses the proposed oncological treatment because she is poorly provided for and believes in non-traditional methods of treatment.

With the help of resonant frequency diagnostics and therapy, worms of schistosoma hematobium were identified and destroyed.

After 4 days, the bleeding stopped. About a year passed. Repeated ultrasound examinations do not reveal any pathology. Feels completely healthy.

Example 2. Patient I., 4 years old. Diagnosis: vesicoureteral reflux. Dilation of the distal ureter. Operation proposed.

According to the mother, the child's urine is cloudy from birth, with an unpleasant odor.

In this patient, hematobium schistosomes were also identified and destroyed. A week later, the color and smell of urine returned to normal. After 2 months, there are practically no pathological changes on ultrasound

Example 3. Patient H., 21 years old. Diagnosis: ulcerative colitis. Has been ill for about 4 years. She was repeatedly diagnosed and treated in Turkey, Russia and Germany without significant effect. Stools mixed with blood, abdominal pain, fatigue, etc. continued to be disturbed.

With the help of resonant frequency diagnostics and therapy, whipworms, Mansonia schistosomes and duodenalis hookworms were identified and destroyed. Prescribed a meat-free diet, propolis. The abdominal pains disappeared after 3 weeks. The blood in the stool stopped after 1.5 months. Complete recovery of the patient was confirmed by control colonoscopy. About a year has passed - there are no health problems.

Example 4. Patient S., 31 years old. Pregnancy 7 months. Ultrasound reveals a huge cyst growing from the cervix into the uterus. Gynecologists believe that the cyst is already interfering with the further growth and development of the fetus. After 2 weeks, a cesarean section was planned. The patient was warned that she might have to

remove the uterus.

With the help of resonance frequency diagnostics and therapy, worms of schistosoma hematobium and mold mucosis fungoides were identified and destroyed. This fungus is considered by many to be one of the causes of cancer.

After 6 days, the relatives reported that they were urgently going for an ultrasound scan. the patient has a watery discharge. On ultrasound, it turned out that the child and the water were normal, and the cyst was deflated.

Subsequently, the gynecologists refused the operation. On time, the patient herself gave birth to a healthy child.

Example 5. Patient K., 38 years old. Diagnosis: condition after CABG.

This tall, broad-shouldered man, who had never been sick before, suddenly felt pain in his heart 7 months ago and was hospitalized with a diagnosis of myocardial infarction. Doctors saved his life, but the cause of the illness was not found out.

Bypassing the vessels is similar to welding a normal pipe bypassing a rusty one.

Such patients often have shunt blockages and other complications of the underlying disease.

With the help of resonance frequency diagnostics and therapy, the patient was diagnosed with Mansonia schistosomes, which live and damage the walls of blood vessels. Scabs are known to form on damaged skin areas. The same crusts from cholesterol are formed on damaged areas of blood vessels. In such areas, thrombosis and hemorrhage easily occur.

Unfortunately, this patient was dissuaded from treatment on the IMEDIS apparatus.

My experience confirms that the cause of diseases of the cardiovascular system in most cases is blood-sucking, that is, worms damaging blood vessels (schistosomes, hookworms, whipworms, ascaris larvae.) And (or) fungi (cladosporium, aspergillus, sporotrich, etc.) ...

Practice confirms that in 2-4 months after the destruction of parasites, cholesterolemia also decreases.

There are many interesting examples related to other parasites, but I specifically focus on schistosomes also because, according to official medical data, schistosomiasis, as well as opisthorchiasis, clonorchiasis, metagonimiasis, paragonimiasis, not in Azerbaijan. In Russia and in many other countries, schistosomiasis is also practically not diagnosed, because considered a tropical disease.

On the other hand, biologists-parasitologists have found many foci of schistosomiasis, opisthorchiasis, metagonimiasis in the reservoirs of Azerbaijan.

Schistosome larvae enter the human body through the skin upon contact with fresh water (bathing, fishing, washing, watering, etc.). Opisthorchiasis and metagonimiasis can be contracted by eating poorly cooked fish or undersalted caviar. Therefore, there must be a lot of people infected with these worms.

The lack of reliable diagnostic methods for these parasites hides the real picture of the infection of the population. These worms are not even remembered

---

---

most doctors! So it turns out that they are trying to treat diseases, not eliminating their cause. Hence, there are so many common "diseases, unexpected "incurable heart attacks, strokes, infertility, etc.

Using a resonant frequency diagnostics schistosomiasis it is diagnosed very often, in almost every 4th patient examined, and with a wide variety of diseases. The same can be said for other parasites. It is criminal to turn a blind eye to such facts.

It's time to shout "SOS" !!!
