

Allergic rhinitis, sinusitis, sinusitis, bronchial asthma -
links of one chain
Z.B. Tairova
("Eliseeva Medical Center", Moscow, Russia)

Currently, many children suffer from various allergic diseases and, in particular, of the upper respiratory tract. Their incorrect treatment often leads to serious complications - bronchial asthma, chronic sinusitis, adenoid growths, polyposis.

Based on the functional principles of immunology, genetics, embryology, human biochemistry and neuroendocrinology, Vijaynor developed and presented to the homeopathic world a scheme of suppression and direction of cure.

Treatment of chronic allergic, vasomotor rhinitis with drops, antihistamines, as a rule, causes vasoconstriction and mucosal atrophy, which, in turn, leads to tracheitis, bronchospasm and other similar diseases. The symptom of the disease manifests itself, first of all, in those organs and tissues in which the immune system is weakened.

In the Eliseeva Medical Center, treatment involves identifying the causes of the disease, the presence of bacteria, viruses, protozoa, which are essentially the cause of weakening of the immune system, slagging of the body and, as a result, causes allergization, violation psycho-emotional state of the child. It turns out to be a vicious circle.

Treatment:

1. Cleansing the body of toxins (drains, homeopathic medicines, tyubazhi, bowel irrigation).
2. Resonant frequency therapy contributes to the formation of a therapeutic effect in diseases caused by bacteria, worms, protozoa.
3. Prescribing drugs that increase immunity.
4. Improving the psycho-emotional state.
5. Elimination of hereditary information - anti-miasmatic drugs.

Cleansing the body - prevents the occurrence of adenoids, polyps, allergies, bronchial asthma.

Induction programs, BRT - have a beneficial effect on the general condition of the body.

Of particular concern is the presence of asthmatic conditions leading to the occurrence of bronchial asthma. In some countries (Great Britain, New Zealand) asthma is declared a "national disaster". The causative agents are chlamydia, viruses, protozoa, staphylococci. From the moment of the first attack of suffocation, the quality of life in asthma reaches "zero" in a short time, turning a person into a disabled person. Asthma is a life full of hardships and inconveniences, - inhalers, hormones, sleepless nights.

Bronchial asthma is very often combined with skin diseases.

From the point of view of allopathy, bronchial asthma is considered an incurable disease.

Improper treatment of allergic dermatitis in children with hormonal ointments leads to the development of bronchospasm (according to Vijaynar - systematic

suppression at 7 levels).

Conclusions: diagnostics by the method of ART, RFT, BRT, homeopathic treatment - an effective approach to the treatment of rhinitis, sinusitis, adenoids, bronchial asthma.
