

Using exogenous bioresonance and color therapy
for the treatment of chronic infection. Case from practice
L.P. Fedotova
(Krasnodar, Russia)

We have been using the equipment of the IMEDIS Center in diagnostic and therapeutic practice for about 20 years. We started with the first apparatus for working according to the method of R. Voll, then they began to use the methods of BRT and ART. And we still do not cease to admire the unique possibilities that this technique provides for an accurate diagnosis, identification of the causes of the disease and the step-by-step elimination of health problems. Even when the doctor's capabilities are limited, it is still possible to achieve good results using various methods of energy information medicine. I would like to tell you about the experience of using exogenous bioresonance therapy with fixed frequencies and color therapy in the treatment of severe chronic infection.

This incident happened four years ago. I had a long business trip to the Near Abroad to a large industrial center. Since it is a different state, and I didn't have to count on getting medical help, just in case I took the device "MINIEXPERT-DT" with extended functions, "Transfer", a cassette

"Organopreparations" and two cassettes, self-made cassettes, in which the minimum necessary preparations are stored in order to identify the cause of the pathology and help yourself if health problems arise. The prefabricated cassettes included pointers to geopathogenic, electromagnetic, radioactive, psychovegetative loads, Intox, DRE, DIS, SIN pointers from the OHOM cassette, Roy Martin's detox and some of Dr. Reckeweg's complexones, meridian and FM complexes.

During a business trip, I accidentally met a longtime acquaintance of L.E., whom we had not seen for 20 years. She spoke about her health problems and asked for help.

At the time of the examination, she was 57 years old. As it turned out, for more than twenty years a woman has been suffering from severe bronchitis with an asthmatic component. She often lay in hospitals, received antibiotic treatment there, but there was no improvement. Complaints: coughing fits, choking, asthenia, low mood. During the examination by the ART method, geopathogenic, radioactive, electromagnetic, psycho-vegetative load of the 5th degree, depressive disorders, intoxication with heavy metals, free radicals. The most affected organ is the liver, the organ that is the source of complaints is the lungs. Viral, bacterial, fungal burden, dysbiosis of the large and small intestines were tested. After the diagnosis, I removed her geopathogenic, radioactive, electromagnetic load, recorded a frequency of 6.2 Hz on the homeopathic crumbs, picked up drainage, symptomatic preparations from the company "OHOM". Despite the fact that all the drugs were tested for tolerance and effectiveness, the therapy caused such a release of toxins in her that she could not work. And this was extremely undesirable, since the service had a negative attitude towards her illness, because many production problems appeared.

"Stuffed" with computer technology, and medicinal preparations were discharged from electromagnetic burden.

It was necessary to look for other methods of therapy. I found out that in this city there were no specialists engaged in energy information therapy who could continue the therapy of the patient after my departure, and I did not want to start the treatment process and did not want to complete it. I decided to try resonance frequency and color therapy. In our work, we use the Dinschach color light therapy method. Having got acquainted with his methodology according to the book by Yu.V. Gotovsky "Color Light Therapy", my supervisor - N.A. Fedotov contacted Dinshah's son Darius, who is now continuing his father's work. We received the necessary light filters from America, and Dr. Fedotov developed his own design for a light therapy device, for which he received a patent of the Russian Federation. More details about this technique are described in another report.

By the order of the patient, they made an apparatus for her in three days, and we began treatment. Sessions of color therapy according to the Dinshah method differ significantly from a similar technique carried out on the device "MINI-EXPERT-TsT", produced by the center "IMEDIS", where the effect of color is short-lived. In our clinic, the patient himself carries out the treatment at home twice a day, in severe cases, it can be three times. Color therapy is carried out for an hour in the morning - with bright colors, in the evening - with dark colors, the effect is carried out directly on the skin. Also, structured water is prepared daily, on which information of the required color is recorded. During the day, this water is drunk.

The use of color is highly effective for a variety of diseases. It perfectly restores energy, removes blockages of chakras and meridians, regulates homeostasis, improves the mental state of a person and directly affects organs. The selection of the required colors was carried out using the ART method, the required colors were tested for tolerance and efficacy, and tested for the optimal step of therapy through Cu met. D400. The colors were selected for therapy: yellow, lemon, orange, ideal red, green - in the morning, alternately. In the evening, turquoise, indigo, blue, purple, violet were used, which also alternated.

During toning, the patient pronounced aloud positive affirmations regarding the given color and problem organs. The affirmations went something like this: "This color (calls it) helps me restore my health. My vitality is increasing, my energy is being restored. I am in the excellent mood. My organs are working great. "

After seven sessions of exposure to one color, for example, lemon, opposed turquoise was used to prevent the body from getting used to this color. A more detailed effect of each color according to the Dinshah method can be found in the book [2, pp. 103-111]. So yellow and orange colors have excellent lymphatic drainage and lymphatic stimulating effect, improve the functions of the gastrointestinal tract, stimulate the motor and sensory activity of the central nervous system, in addition, the orange color promotes the regeneration of the lungs, metabolic

processes. Dinshah advises using lemon and indigo for severe chronic and even oncological diseases. Lemon removes toxins and poisons, including arsenic, lead, which was very important for the patient, since she had been working as a typesetter, a printer in a printing house since 20 years and she was diagnosed with severe lead intoxication. Also, this color promotes the discharge of phlegm in bronchitis, regulates the activity of the immune system.

During therapy, I tried to make the most of the entire arsenal of tools in order to improve the patient's health in a short period. Every day at home, she conducted therapy with a frequency of 6.2 Hz to relieve geopathogenic, radioactive, electromagnetic load, and took structured water. On the homeopathic crumbs were also recorded with OHOM drains, which she took three times: in the morning, upon returning from work, in the evening before going to bed. Using feng shui techniques, I found favorable directions for her to sleep, eat, and conduct business negotiations. The formation of positive thinking and color therapy helped her to change her mood, raise vitality, and improved relationships with others.

Dinshach color therapy works quite mildly, without causing deterioration in health. But for the treatment of severe chronic infections, it takes a very long time, maybe six months or longer, which I did not have. More effective measures were needed. I decided to use additional exogenous bioresonance therapy with fixed frequencies, and the equipment allowed me to do this. As noted above, the patient was diagnosed with a viral, bacterial, fungal burden. Viruses were the key problem. At first I tried to apply resonant frequency therapy with F-programs. But the patient tolerated these sessions worse. Then, for the elimination of Coxsackie viruses (serological types one and four) and Epstein-Barr, I selected fixed frequencies E. Treatment was carried out on the device "MINIEKSPERT-DT" using the UMT "belt" and "loop" daily in the evening. For therapy, I took one or two programs per session, intensity 30 units. The sessions were carried out three times, 10 minutes each, with breaks of 20 minutes. On the plate for drug testing were 2 grains of the DIS preparation for viral infections of the company "OHOM". The burden with the Coxsackie Virus was removed quickly, about two weeks, but the Epstein-Barr virus required daily therapy for a month and a half.

After the therapy, the patient's well-being improved significantly. Sleep has normalized, a lot of energy has appeared. If earlier it cost her a lot of work to go up to her home on the 4th floor, coughing began, suffocation arose, but now she easily overcame this distance. A young woman could envy her energy. The depression went away, the face cleared, the black circles under the eyes disappeared. She felt an emotional upsurge, in production they noted that the efficiency of her work had increased significantly, colleagues were surprised at the positive changes that had occurred to her. During the treatment period, there was no exacerbation of chronic bronchitis.

My business trip is over, and we have agreed with the patient that we will keep in touch via email. I recommended that she continue with color therapy to eliminate bacterial and fungal burdens. She selected the required color by dowsing, she knew it well,

I have repeatedly checked the accuracy of its color matching during therapy using the ART method. Two months later, an acquaintance said that she was undergoing medical examination at a polyclinic, and for the first time in 20 years, all her tests were good. Initially, she performed color light therapy on a daily basis, continued to take good quality structured water, then she used the color as needed.

Follow-up: 4 years have passed since the therapy. During this period, she had no attacks of bronchitis with an asthmatic component. Once I had the flu, after which there was a complication: sinusitis. During the examination, a cyst of the maxillary sinus was found, an operation was proposed, which she refused. Was treated with color therapy and folk methods. The problem was solved conservatively. Despite reaching the retirement age (age - 58), she continued to work. While we didn't specifically address personal issues, color helped here as well. She was doing well in the service, there were favorable changes in the life of her and her family. This year she retired, and is currently visiting her son and grandchildren in Russia.

Thus, color light therapy allows you to effectively solve health problems, since with the help of color you can align the elements, unblock the chakras and meridians, and heal organs and systems. The use of this technique in combination with exogenous bioresonance therapy with fixed frequencies makes it possible to eliminate even severe chronic diseases, while not treating an individual disease, but restoring the body as a whole.
