

Polarization of consciousness, polarization of the body

S.K. Makina

(Medical center "Vega-plus", Petropavlovsk, Kazakhstan)

From the standpoint of information medicine (IM), a multidimensional understanding of the world of the human body, it assumes the presence of the following levels:

I - informational "I" level. Thought / thinking of a person. The energy of thought, psychic energy carries information and determines the state of level II - the energy body "E".

II - energy level "E". A wave oscillatory circuit or a thin body, or an electromagnetic field (EMF), or a chronal, or so-called quantum field determines the state of the physical body "FT".

III - physical level. Dense physical body "FT". Matter of a wave nature, including all the physical properties of waves.

Life is possible only with the optimal interaction of these three levels. By combining the above levels I and II, a new system is formed in the human body: the "energy-information system" and its optimal integration with the "FT" leads to energy-information homeostasis, "information homeostasis" [1], followed by the development of neurohumoral homeostasis, which ensures good health. From the point of view of MI and fundamental knowledge of normal (systematic) human anatomy, the introduction and study of the section of the human energy-information system into human anatomy is extremely important in understanding the achievement of full-fledged human health by any type of therapy, especially biophysical types of therapy.

A. Einstein discovered the law of mutual transformation of mass and energy $E = mc^2$, where the relationship of energy and mass is confirmed and the idea of the possibility of converting light energy and mass into each other. General relativity has combined time, space and matter. It turned out that matter changes the properties of space and the course of time. $E = mc^2$ [2]. According to this formula, matter is nothing more than a temporary form of expression of energetic condensation, which can disappear in a split second. The decisive formative principle is not mass, but information-driven energy. Einstein was the first to show that these two worlds - the world of matter and the world of energy - are permeable, you just need to see the connection between them and learn how to convert mass into energy and vice versa. It is considered proven that in living systems all biochemical processes are under genetic control, and the rate of biochemical reactions is associated with the energy of the cell, the energetic organization of the organism as a whole. Energy in the broadest sense of understanding is the basis of all that exists on Earth.

A person / humanity lives on planet Earth and is in a single energy-informational field (UEIP). The earth is a giant magnet around which a magnetic field is formed. In 1905, Einstein named one of the five main mysteries of physics of the time - the cause of terrestrial magnetism. The planet forms around itself an absolute magnetic field - the magnetosphere. It follows from this that all living organisms are "programmed" to appear and develop in the environment of the absolute earth's magnetic field, which is characterized by a sufficiently significant role for all biochemical processes in the body. All fauna: plants, animals, people are influenced

terrestrial magnetism. All living things need magnetism as much as water, air, food or sunlight.

Rice. one. The Earth's magnetosphere extends over more than ten radii of our planet. It serves as a natural shield that protects the population from destructive cosmic rays.

From the point of view of MI, health, formula $E = mc^2$ corresponds to the norm of health and it can be considered as follows.

We assume that in the formula "M" is a symbol Material energy. The highest manifestation (m) material energy on planet Earth are the energies of the bodies of the planet Earth itself, of man / humanity, possessing the power (m) - magnetic attraction. From the position of Eastern philosophy, this is "yin" energy. Sign "-".

"C2" - energy symbol WITHVeta, penetrating the mass (FT) with the speed squared, is the highest manifestation of the energy of the spirit (EEIP): c - consciousness, c - cordiality, love, kindness shown squared to align the force of attraction of material energy. "Yang" energy. "+" Sign. "In a sense, the human body is a system that is subordinate to the rhythm of the heart, since it is the source of the most powerful electrical activity of the generated potentials [5]."

"E" - a symbol transformed through the consciousness of a person / humanity, (E) - NSthe energy of light necessary to sustain life itself.

Thus conditionally "M" - the energy of matter, "with" - energy with hearts, "E" - glow emanating from the bodies of a person / humanity, planet Earth.

The quantum theory of electromagnetic radiation is based on the idea that electrons emit and absorb energy in discrete portions - quanta. The word "quantum" comes from the Latin word quantum - how much, and "photon" is from the Greek word photos - light. How to provide my body with energy of quanta of light? What does it all depend on?

The central bioenergy channel, which runs along the cerebrospinal axis, with sufficient openness, provides free passage of energy flows (yin "-", yang "+"), information and bioenergetic exchanges. The transmission of information through the channel, represented by the central nervous system, is provided with the help of the energy of light quanta, which gives an impulse to neurotransmitter exchanges.

in Dahl's dictionary - m. Greek. white-skinned, sensual or chul lived in the body; the vehicle of feelings and all animal activities (movement, nutrition, assimilation), between the focus of brain activity and other parts of the body; "Aramaic. ancient language means "connection"; in the Ozhegov dictionary - one of the finest

filaments, forming a branching system that connects the brain with other organs and tissues of the body; pl. h. This whole system as a whole, which determines the activity of the organism and human behavior.

Nerve fiber provides communication, conduction, permeability: the transmission of light energy, directed waves at a certain speed, with the participation of certain own neurotransmitters, with the subsequent development of depolarization of the cell membrane (excitation of synapses - Na, K ions) and hyperpolarization (inhibition of synapses - K, Cl ions).

$E = mc^2$, where "M" - body weight of a person / humanity, planet, imbued with the energy of quanta of light "C2", is the main condition for maintaining an optimal energy status, and this ensures a continuous relationship with the UEIP, an influx of renewed energies and the safe maintenance of life itself. I live fully until "c" - light with speed squared penetrates me, my mass - "m" And interacts with me. From this it follows that I am optimally generating energy (glow) [8] -"E" and at all levels: "I", "E", "FT" optimal dissymetry [4], harmonization [5], synchronization, polarization [4] is achieved. Life events are built from the understanding that consciousness is primary, and matter is secondary, to be in the light.

To provide $E = mc^2$, health standards are necessary openness of the central bioenergy information channel, but from the position Eastern philosophy - the channel "sushumna". From Wikipedia "Sushumna, Sushumna Nadi (Skt." Sunbeam ") - according to the ideas of Indian yoga, the central Nadi (channel) of the human energy system. This the energy channel passes through the inner part of the spinal column ... originates at the base of the spine (at the location of the Kundalini), runs along the spinal cord and ends at the crown of the head the strength of the Kundalini, awakening, rises up to the Sahasrara chakra. " The state of the Sahasrara - chakra provides the entry of the energy of the light stream, the sky - the sign "+", and Kundalini, respectively, the entry of the energy of the Earth - the sign "-". To open the Sushumna channel, it is necessary to create optimal conditions for opening of the Sahasrara chakra, which will allow the optimal amount of light energy to penetrate the FT.

Rice. 2.Sushumna Nadi's scheme

A person, according to the principle of similarity, in accordance with his information-energetic status, due to magnetic properties, attracts to himself what he is, what he emits - the same energy-informational similarities, and enhances his initial spectral characteristics. It becomes clear the meaning of a person's thinking stereotype (level I) and the consequences

this mindset for his health.

Bioobjects on Earth and, above all, humans, like the body of the planet Earth, are 70–80% water. Water captures the information that has entered the body. In this aspect, the studies of Masaru Emoto (Japan), who study the effects of informational influence on water, are of great interest [6]. Photos from the books of M. Emoto.

Rice. 3. "Failure" brooch. such a label on the water bottle. Water is trying to form a crystal

"Luck" Crystal is like a diamond. Perfect, harmonious beauty

Rice. 4 Exposure to radiation mobile phone for water (dead water) "Love and gratitude" (living water)

The photo (Fig. 4) shows the negative destructive effect of cell phone vibrations (external factor) on water. Without removing the phone (external factor), the same water was influenced by the positive information "Love and gratitude", and the structure of the crystal appeared, the water began to radiate another creative energy. One image of destruction was replaced by another image of creation, and we see "Transformation effect".

In Emoto's laboratory, a photo of a virtual diamond crystal was obtained under the influence of positive information "Appreciation and gratitude".

Rice. five."Appreciation and gratitude"

It is known that light preliminarily passes through bodies, being refracted and partially absorbed in them, or more or less fully reflected from their surface. In the vast majority of cases, all such processes lead only to the weakening of certain spectral regions and can even completely eliminate some of these regions, but do not add to the light that came from the source radiation of those wavelengths that were not in it [7]. In a diamond - a cut diamond crystal, starting from a certain angle, light, to the border with air, is reflected entirely in the diamond and has one of the highest dispersion values among minerals. To describe the fraction of light returned to our eye, compared to the amount of incident light, the term "sparkle" is used - glow and radiance. The quality of the shine depends on the quantity and quality of light, reflected from the surface of this gem (about 17%) and from the inner parts of the diamond (about 80%). Almost 97% of the light returns to the observer's eye already in the form of a radiance. Light enters and leaves this crystal in its original form, practically without weakening its spectral characteristics. "The energy of the system of particles of a diamond single crystal is minimal and is in the equilibrium position [7]." A diamond returns the energy of light, gives it back to space (97%), manifests it, makes light visible. This informational effect on water is an attempt to create a virtual single crystal, which is characterized by the effect of "equilibrium position [7]". Light enters and leaves this crystal in its original form, practically without weakening its spectral characteristics. "The energy of the system of particles of a diamond single crystal is minimal and is in the equilibrium position [7]." A diamond returns the energy of light, gives it back to space (97%), manifests it, makes light visible. This informational effect on water is an attempt to create a virtual single crystal, which is characterized by the effect of "equilibrium position [7]". Light enters and leaves this crystal in its original form, practically without weakening its spectral characteristics. "The energy of the system of particles of a diamond single crystal is minimal and is in the equilibrium position [7]." A diamond returns the energy of light, gives it back to space (97%), manifests it, makes light visible. This informational effect on water is an attempt to create a virtual single crystal, which is characterized by the effect of "equilibrium position [7]".

From the point of view of information, the expression "a crystal clear person" becomes clear - this is the quality of being fully permeated with light, being in the light, taking primary information through the energy of light from space, manifesting it through your consciousness and returning it to space (about 100%), and acquiring the appropriate glow.

In the experiment with water in a test tube (Fig. 4), water randomly changes its properties, depending on the influencing information (positive or negative), which creates a different temporary deep informational connection between the hydrogen and oxygen molecule (creative or destructive) and, accordingly, has properties of living or dead water. At the same time, regardless of the type of information, the organoleptic properties of water are the same in all cases. Man, on the other hand, has a distinctive property from other biological objects - the property of thinking. He receives information from the surrounding space in the form of energy of quanta of light and changes it, refracting it through his consciousness. Through the energy of thought, word, psychic energy, a person has a direct impact on the state of energy of his own FT and bio-objects of the surrounding space. Water,

bioobjects. Thus, from the perspective of IM, a person / humanity bears personal responsibility for their own health and the health of the surrounding space. Hence it follows that for life support, preservation of energy-informational homeostasis, it is advisable to form creative energy through a positive stereotype of thinking (PM). Independent work of a person on level I, from the perspective of the multidimensionality of the world, presupposes the need to analyze the negative events that have happened, to understand the reasons for their occurrence, to understand what stereotypes of negative thinking led him to this problem, to extract from all this rational grain (to understand what he is being taught) and change the stereotype of thinking in a positive direction. This path of constant independent work ultimately leads to the transformation of negative vibrations into positive ones, harmonization, synchronization, polarization of subtle bodies in the rhythm of the heart at all levels of the human body (I, II, III), coherence with the harmonizing rhythms of the UEIP oscillations.

From the point of view of information and Einstein's formula, the state of illness, desynchronization, disharmony, symmetry can be conditionally described as $E = mc^2$ - $E = m^2c$ and as an extreme variant of events, death, when the light fluxes leave the FT, and the energy bunch, with its specific spectral characteristics, returns to the general light flux of the UEIP. A person creates a situation due to greater attachment to material values, material energy (c^2 or m^2), therefore, he spends his vital energy mainly on material support. Life events are built from the understanding, to varying degrees, that matter is primary and consciousness is secondary. The formula $E = mc^2$, and a situation of deficiency of the creative, life-giving power of light energy is created, leading to destructive consequences at the levels of FT and life events. In the "VRT" testing mode, general and specific indicators are tested in accordance with (mc^2 or m^2c) below 80.

The general module of universal thinking (psychic energy of collective consciousness, level I determines the state of level II of planet Earth, with the subsequent development of the corresponding events on the scale of certain other regions and the planet as a whole. Desynchronization, disharmony, tendencies to symmetry of the subtle body of the planet Earth, develop due to predominantly negative, destructive leading, in turn, thinking of humanity, to cataclysms, epidemics, climate change, etc. It follows from this that the philosophy of dealing with external influences (IV): evil eye, damage, earthquakes, floods, fires, etc. takes a person away from awareness and philosophy of interaction. There are only internal reasons - my thoughts, thoughts on the scale of a group of people, country, continent, planet, which determine the state of human / humanity events. Responsibility for the life of everyone, of all mankind, of the planet is borne by each of us - HUMANITY / HUMANITY.

Rice. 6.The relationship of human / humanity thinking and planetary events

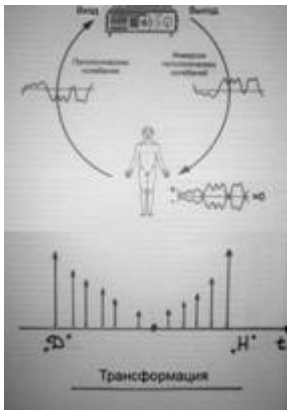

Thus, Man acts as a source and epicenter of events.

An informational negative event works with a warning effect according to the "traffic light" principle - and this is a red light. Ignoring red light often leads to irreparable consequences. From the point of view of multidimensionality, negative events should stop a person from analyzing and realizing his mistakes, changing himself and successfully moving along the path of life. The personal work of everyone at the informational level leads to the opening of the Sahasrara chakra, the opening of the "Sushumna" channel, its conductivity, permeability, the alignment of "living magnets" —molecule mediators along the nerve wire for the harmonizing energies of the UEIP light quanta. All this creates conditions for the development of harmonizing, synchronizing vibrations at all levels of a person, full-fledged interaction of the subtle body (EMF) with FT, a person's stay in the light, in the EEIP, prolonging life, improving the quality of life, continuous tissue regeneration, the development of positive life events (fate). This is the path of movement of the creative energy of light through the tree, only upside down. The state of the tree of life depends on what thoughts we water the root system, to what extent the life-giving energy of light will flow along the trunk of the tree. From the perspective of multidimensionality, a conscious transformation of the stereotype of thinking man / humanity allows you to independently change your events, your destiny, without negative consequences for the surrounding space.

Thus, the main task of a person / humanity is the formation of a positive stereotype of thinking that has a healing (be whole, all levels interact), life-giving power and correspond - $E = mc^2$. In the "VRT" testing mode, general and particular indicators correspond to the value of 80 conv. units

To restore health from the position of myocardial infarction, the following methods of therapy are possible:

1. Bioresonance therapy (BRT) according to the method of Yu.V. Gotovsky

Rice. 7.BRT scheme

The invaluable uniqueness of the BRT technology created by Yu.V. Ready in that the device allows you to work with the patient in the mode endogenous therapy, with his own, self-created vibrations. The therapy is maximally individualized and patient-specific. In the process of BRT, the transformation of "D" into "H" occurs. The amplitude of "H" -vibrations is amplified with the help of the apparatus, and we get a delta in favor of harmonious oscillations - $H > D$. The apparatus in real time, "here and now", harmonizes the energy of the physical body, regardless of changes in vibrations of external fields. BRT introduces a person into energy balance, contributes to the creation of a virtual crystal, it is possible to restore the conductivity of energy channels and create conditions for the free passage of the energy of light fluxes. At the same time, it must be remembered that negative changes in the subtle body of a person were the result of the impact of negative information created by the person himself. Without a person's awareness of what happened, the source of negative information and negative fluctuations remains.

From the perspective of MI, the multidimensionality of the world, the following therapy options are possible:

1. Conducting only BRT - from session to session. Positive effect persists for some time. The problem is at best and in most cases comes back and is chronic. In the worst case, the information and energy of the problem is transferred to another organ, to a family member or just to another person. The plot unfolds as in the conditions of conventional chemical medicine. Substitution therapy. The effect is created $E = mc^2$ without realizing the problem that has arisen. Patient levels II, III are involved in the therapy process. Polarization EMF at the "FT" level due to exposure to the BRT apparatus and the professional skills of the doctor. Unstable program.

2. Conduct BRT and explanation to the patient about the multidimensional structure of the world, understanding the causes of the development of the disease, their awareness, leading to a change in the stereotype of thinking and the patient's independent work on himself. The pauses between sessions increase. The aggressiveness of the disease is significantly reduced. There is practically no transfer of information and energy, since the source of negative information and negative vibrations (level I) is connected to the therapy process. Doctor and patient- in one team.

All levels of the patient are involved in the therapy process - I, II, III. The information and energy space of the patient, the society in which he rotates, the region is changing.
Effect: $E = mc^2$ created with the awareness of the problem that has arisen

the patient. the effectpolarization of EMF at the levels of "FT" and consciousness "I", is formed due to the impact, respectively, of the BRT apparatus, professional skills of the doctor and work on oneself by the patient himself. BRT certainly catalyzes the healing process. An accelerated, sustainable long-term program without negative consequences for the patient himself and the environment. The possibility is created for the energy of light fluxes to pass at a speed squared and with the passage of a certain time and above.

3.A person works on himself on his own, changing the stereotype thinking (level I), followed by positive energy-informational effects at levels II and III. Effect: $E = mc^2$, with the awareness of the problem that has arisen and constant work on oneself. The effect of polarization of consciousness (level I) with subsequent similar changes at levels II, III. A sustainable long-term program without negative consequences for the patient himself and the surrounding space. The energy of the light streams pass at a speed squared and higher.

4. Step-by-step application of items 1 to 3 or various combinations points

Variants, results, duration of therapy depend on the level of the initial problem and the degree of the person's readiness to realize the problem, internal changes. When the ART indicators reach the level of 80 conv. units, at the end of each session, the BRP (bioresonance preparation) is recorded.

Ways to obtain harmonization, synchronization, polarization of the subtle (EMF) human body:

1. BRT using various author's techniques.
2. Changing a person's thinking from the perspective of multidimensional understanding peace, understanding the fact of the EEIP.
3. Spiritual practices (yoga, qigong, reiki, etc.)
4. Adoption of a religion of one of the religious confessions.

Without item 2, all methods do not have a long-term sustainable perspective and can have negative consequences both for the patient himself and for the surrounding space. Expansion of consciousness leads to an expansion of the volume of memory, to the assimilation of more and more information and the disclosure of more and more new human possibilities.

In therapy without changing a person's thinking (level I), that is, the source of negative information and negative fluctuations remains, from the perspective of multidimensionality, the problem returns or migrates:

1. To another organ or organ system.
2. To another member of the family, the family tree.
3. From a physical organ to an event level.
4. From one geographic location to another.

What is dissymmetry for, optimal dissymmetry ($E = mc^2$) from the position of crystals provides: to be in the light - harmony - regeneration - a life - coherence - creation - evolution (spiral upward).

Symmetry ($E = mc^2$ - $E = m^2c$) - death of the physical body (as an extreme option) - disharmony - degeneration - destruction - destruction - involution - death (spiral down).

Any therapy, from the point of view of multidimensionality, should be based on

changing, first of all, the consciousness of a person / humanity, his awareness, to the cultivation of a virtual diamond crystal: a change in the information properties of water, with subsequent positive energy-informational effects at the level of the subtle body and FT, preserving the life of the person himself, humanity and the planet as a whole.

To achieve the full health of MAN / HUMANITY, it is necessary to form harmonization, synchronization, optimal dissymetry, polarization through the art of controlling thought, conformity $E = mc^2$.

Arises general a task: extension CONSCIOUSNESS human / humanity:

I am expanding my consciousness.

I am in control of my thoughts.

I am forming a delta of positive thinking.

I form the optimal harmonic oscillation Delta. I go into optimal dissymetry.

I am constantly open to light streams, higher, harmonizing vibrations.

I create. I create in myself a virtual diamond crystal. I continue to live on this Earth "here and now."

I am expanding my spectrum of the frequency corridor. I change the properties of cell memory in the direction of its increase, thereby achieving longevity- continuous regeneration and improved quality of life. Or maybe the boundaries of possibilities are expanding even further.

Rice. eight. The scheme of the evolutionary development of human consciousness, humanity from the standpoint of the rule of the "golden mean", the middle path

Right at the peak of the spiral - (M) - yin energy, a symbol of the material understanding of the world, material energy, which has the power of attraction.

Left at the peak of the spiral (C) - yang energy, a symbol of energy WITHveta, spiritual understanding of the world, a symbol of the highest manifestation of the energy of the spirit. Light is knowledge

which add up from knowledge spiritual and professional. Professional knowledge must be mastered by everyone, since they are the basis of material support. At the same time, you need to be able to maintain a golden mean, a balance between these categories. To shape your life so as not to go into material oversaturation or fanaticism in terms of spiritual development. Only the observance of the golden mean will provide a person with balance: the ability to virtually stand upright, be open to light streams and progress from one monad of the spiral of life to another of a higher order.

Variants of the relationship between the material and spiritual understanding of the world (Fig. 8).

1. $M = C$ - There is no delta. This situation can be at the peak of a career, more often in aged 30-40 years. A person has achieved what he was striving for: profession, family, children, etc. All this time there was motivation and interest in promotion and development. A state of relative stability sets in. After a while, it gets boring. The effect of novelty disappears, the feeling of something for the first time. Search begins. Search for either new knowledge, or acute physical, material sensations. Relative stability is ending. Choice $E = mc^2$ or $E = m^2c$ defines the type of relationship with the UESI. The situation is developing "you will go to the right ($mc < 2$ or m^2c)?", "You will go to the left (mc^2)?", "You will go straight - you will find happiness (part of a unified consciousness)!"

2. $M > C$ - Delta destructive, tendency to symmetry. Option $mc < 2$ or m^2c . Leaving for material saturation, oversaturation, searching for thrills, investing energy in the material world: hobbies for smoking, alcohol, drugs, physical sex, etc. The energy of matter tends to attract more and more. All this leads to an energy crisis, an economic crisis (devaluation of true values). A person rolls down a spiral at different speeds: a narrowing of consciousness, degradation, overlapping of energy centers, channels, BAP, a decrease in the flow of energy of light streams - destruction, and as an extreme option-

separation of the subtle body from the dense, death of the physical body (human / humanity, planet). Separation and isolation from the EEIP.

3. $M < C$ - optimal delta, creative. Option $E = mc^2$ - expansion of consciousness, the spectrum of the corridor of frequencies of a person / humanity, memory (from 3% to the expansion of memory to 100%) and the disclosure of more and more new possibilities of a person through his own awareness. A person, observing the rule of the golden mean, builds his rational material world and harmoniously comprehends professional and higher spiritual knowledge. He knows how to control his thoughts, regulate information flows, developing a steady heart rhythm, in the rhythm of the UEIP. All this allows him to virtually stand straight, to be balanced, completely open for the free continuous passage of the energy of light streams, to connect with light, which will ensure continuous regeneration, continuation of life, continuous improvement of the life of man / humanity, planet Earth.

4. $M \lllll C$ - Delta is not optimal. Skew to the left, mainly in the spiritual understanding of the world. Diminishing the role of material energy, yin energy, earth energy, earth magnetism. Who will create the matter that we need at this stage of life: food, clothes, shoes,

books, etc.? It is necessary to create matter for a prosperous life support. Fanaticism. Virtually a person does not stand upright, there is no balance, no balance. Consequently, there are no conditions for the free passage of energy flows through a dense body. There is no downward spiral, but there is no progress up the evolutionary ladder either. Separation from the EEIP to varying degrees.

Rice. nine. The scheme of expanding consciousness, the formation of an optimal delta

The change in the stereotype of thinking is based on the process of understanding, analyzing the reasons for the emerging negative events from the standpoint of faith, patience, humility, gratitude, gratitude. And this is a big thorny path to a true understanding of LOVE, the return of heart rhythm oscillations to a synchronized rhythm, with the primary rhythm of the UEIP, which ensures life itself.

Rice. 10. "Black Square" (K. Malevich, 1915) or $E = mc^2$

On the canvas, the artist conveyed his inner feelings of the world to what is happening in Russia. The skew of the society's consciousness into the material world (black square), and a little light (along the perimeter, consciousness) is depicted. "More often than not, there is no light in the Russian sky. And the soul has no choice but to produce invisible stars from itself. " Option to disconnect from the EEIP. The artist's goal is depicted, how to preserve the life of Russia. Trends towards $E = mc^2$. From the point of view of energy, physicist A. Einstein and artist K. Malevich brilliantly laconically displayed the informational law of the Universe: the law of conservation of energy. The right to choose the path of development: $mc < 2$ or mc^2 (path of destruction, involution) - "Matter is primary, consciousness is secondary" or mc^2 (the path of awareness, creation, evolution) - consciousness is primary, matter is secondary, remains for

human / humanity. Choosing a path according to $E = mc^2$, man / humanity, being in continuous interconnection, in resonance with the EEIP, preserves his life, the life of the planet, possibly the entire Universe.
