

Noosphere, human health, ART diagnostics  
O.I. Eliseeva  
("Eliseeva Medical Center", Moscow, Russia)

It is known that the doctrine of noosphere arose as a philosophical doctrine about the inseparable unity of man and the Cosmos, man and the Universe, about the regulated evolution of the world.

"All humanity taken together" - wrote Vernadsky, - "Represents an insignificant mass of the planet's substance. His power is connected not with his matter, but with his brain, with his mind and directed by this mind, his labor. "

Noosphere - a new geological phenomenon on our planet. In it, for the first time, man becomes the largest geological force. He can and must rebuild the area of his life with his work and thought.

Modern man lives and acts in conditions artificially created by him, feeding on the illusions of isolation, independence and independence from nature. Meanwhile, creating a technocratic nature of the development of civilization, to the present moment has led to a global deformation of the Earth's ecology.

Phenomena such as the destruction of the ozone layer, climatic anomalies, an increase in the radioactive background in industrial zones, and chemical emissions are widely known. In addition, an energy imbalance is also being recorded today. The natural ecological system of the planet is under strong pressure from artificial electromagnetic fields, which distort the energy wave impulses of the natural background of the Earth.

Thus, as a result of negative human activity, there is a violation of the deep underlying mechanisms vital activity of all living things. And as a consequence,- distortion of vital energy processes, violation of ecological balance in the human body.

In addition, humanity has a strong influence on the noosphere with its unconscious emotions, uncontrollable thoughts and immoral actions, and therefore we live in such a world that we ourselves have created. IN AND. Vernadsky understood this well when he wrote: "... Man changes the biosphere and noosphere mainly unconsciously ..." (that is, not understanding the consequences of his activities).

In recent years, theories and basic research have emerged that convincingly demonstrate that a person radiates energy all the time. - biophotons, and it is logical to assume that many factors of his life depend on the quality of this radiation. The concepts of biophotons are based on the laws of quantum physics, which asserts that our material universe is nothing more than an informational wave space.

Physics professor Fritz Albert Popp back in 1975 was able to prove with the help of highly sensitive measuring instruments that all living cells emit ultra-weak light, which he called "Emission of biophotons". The effect of these biophotons is comparable to a kind of radio communication between our 70-100 billion cells of the body, serving to regulate all life processes. Therefore, biophotons are fundamental for the transmission of biologically important information for the work and recovery of each

a separate cell. In reality, this process can be scaled to the level of humanity, as a single organism, in which the same principle will work.

Interference in the information transmission of biophotons, for example, due to a negative emotional impact or the appearance of a causative agent of a particular disease, invariably leads to a violation of the body's functions.

From all this, we can conclude that we physically emit light pulses, "sowing" the space around us, like sowing a field, and reaping what we sow.

The psychic energy produced by our thoughts, feelings and actions is the impulses of biophotons that are radiated into space, influencing the forces of Nature, while we also experience its influence on ourselves.

If a person's radiation is positive and harmonious, then, having reached the noosphere, they return to the starting point in a downward positive life-giving stream.

Man, creating negative thought-forms, focuses them in consciousness, from consciousness this energy information spreads, it seemed from a small point, but according to the law of physics as a wide cone, reaching the noosphere. In the course of information movement, this wide oscillatory cone will also capture other people's cones with negative wave thought forms.

And since the vibrations come not from one person, but from a mass of people, these cones of negative waves are summed up, amplified and returned to the person. As a result, the integrity of the human biofield is weakened and disrupted. Regardless of whether we believe or not, we will receive a reward or punishment corresponding to the quality of our radiations.

If a person radiates anger, envy or hatred, then his biophotons will carry this emotional coloring, irradiating the Earth's magnetic field, the noosphere, which records everything, registers and reacts according to the quality of radiation, compensating for its effect.

And if billions of people behave this way, what happens to the noosphere? Probably, it is distorted so much that it causes not only events of a planetary scale, but also changes in our solar system. And if by our behavior we encroach on the harmony of the solar system, then changes in the radiation of the Earth will necessarily lead to an adequate change in the activity of the Sun. As a result of the excitation of the solar corona, an increase in maser radiation will occur, which will affect the human blood plasma, causing the appearance of excited hydroxyl molecules, regardless of whether a person is good or bad. This explains the growth and rejuvenation of cancer, mutation and the emergence of new pathogenic microorganisms, with all the ensuing consequences for us.

Exactly noosphere is the resonator of the Earth, on which the characteristics of not only the ecological, climatic state, development of the Earth, but also socio-psychological and health depend. The noosphere, as well as blood plasma, connects the macrocosm with the microcosm and the state of the noosphere depends on us.

In the book "Reason and Anti-Reason" 2003 prof. doc. philosophical sciences A.I. Subetto writes: "in the twentieth century there is, as it were, the dismemberment of Reason, represented by humanity, into Reason and Anti-Reason."

The mind becomes the bearer of this shift towards the law of unification through public intelligence, the formation of the noosphere of the future.

Anti-Mind forms the anti-noosphere, i.e. something, by its nature, opposite to the noosphere, hostile to all living things not on the Earth. The Sphere of AntiMind in behavior is somewhat similar to a colony of cancer cells that eat up their "donor organism".

Research using the ART method can serve as a partial proof of the relationship between the impact of energy information from the outside and the development of the disease. Examining 300 cancer patients in our Center for 3-4 stages of the disease, in 70% of cases we stated that they had an incorrect polarity (distortion of the flow of energy), a violation of the energy rhythms of the brain. That is, there was the introduction and influence of an alien negative energy information blocking the energy exchange of chakras and meridians.

The doctor's task is to identify early oncology and not even the presence of oncology 1-2 degrees, and in time to ascertain the readiness of the body for cancer.

As a result of follow-up examinations in our Center, 750 patients over 40 years old with various diseases, in 2% (15 people) we revealed pre-oncology to some extent. Moreover, never in any single organ, but in two or more at once. At the same time, they were tested for false polarity and disturbances in the biorhythms of the brain.

Conclusions:

1. A person is a set of spiritual and mental (energy-informational) components that are closely related to cosmic, noospheric and biological energies, and, in turn, are the moral basis of the human material body, affecting health.

2. Diagnostics using the ART method reveals energy blocks in the body a person and the introduction of alien energy information, as a violation of the polarity of a person and biorhythms of the brain.
