

Polarization harmonization of the human body
O.I. Eliseeva
("Eliseeva Medical Center", Moscow, Russia)

First, let's try to consider the problem - why humanity is sick.

As you know, the recent frequent wars, terrorist attacks, crisis, unemployment, banditry have made people angry, gloomy, unkind, not responsive and aggressive.

By sending its negative thought-forms into the noosphere in huge numbers, humanity has exceeded the density threshold of the noosphere, which threatens us with new epidemics, diseases and cataclysms. Also, in this regard, more and more pathological resonators will be created in the blood plasma, diseased cells will be formed, and an electromagnetic environment favorable for reproduction, mutation of microorganisms and the development of oncology will be created. The noosphere and the energy shells of people are so distorted that energy blocks develop in the body, affecting the development of cells, distorting, changing the spin of rotation of chromosomes in the cell nucleus. As a result, not only diseases develop, but also the genetic programs of human functions and development are disrupted.

As you know, in recent years, oncological diseases are increasingly affecting children, adolescents and people under 50.

Over the past 3 years, doctors of our center have diagnosed 300 patients with stages 3-4 of the oncological process. Alien energy information - false polarity - was tested in 70% of them by the ART method. And in patients up to 40 years old, alien energy information was tested in 100%.

In the process of diagnosing 1000 patients with VARIOUS DISEASES by the ART method, we found that a negative foreign energy information TEST-RUETS in 100 of them with degenerative changes in the organs, i.e. in 10% of people in the FORM OF FALSE POLARITY. At the same time, they had a blockage of brain rhythms: alpha, beta, theta, delta. Also tested were changes in DNA, chromosomes, amino acids.

50 of them had pre-oncology to one degree or another.

Thus, it was revealed that negative energy information, blocking the control rhythms of the brain, changing the chromosome number of a person, gradually leads the body to severe irreversible diseases.

In a report at the XII International Conference on the false polarity i reported on the method of correcting incorrect polarity by alignment brain rhythms and BRT with amino acids. But tested in inversion when used, the positive result is no more than we received such a technique in 70% of cases. With the advent of polarizer GSHK the situation has changed, we are achieving success in 100%.

In the course of our studies using GShK in combination with ART and BRT, we found that using the polarizer of GShK and BRT, it was possible to correct the wrong polarity and restore damaged DNA, chromosomes, and amino acids.

The radiation in the polarizer is not of an electromagnetic microwave nature. It is linearly polarized and carries the entire

information about the object: freely penetrates through the environment and resonates with all structures of the body at all levels. These radiations are adequate to radiations of cells and tissues of a living organism, and, depending on the sign of polarization, correspond to a healthy or sick, active or suppressed state of the functions of cells, tissues, organs. (We described the GShK polarizer in detail at the XVI International Conference).

The polarizer allows you to restore the correct rotation of the spin of DNA, chromosomes, amino acids. With its help, we quickly and easily cope with negative energy information - false polarity.

We have developed a method of polarization harmonization of the human body using GSHK and BRT.

This technique was used to treat 50 patients with various diseases. Studies have shown that as a result of the restoration of the spin of rotation of DNA, chromosomes and amino acids, foreign energy information, causing the appearance of false polarity, having no material base in the body, left the person.

With further testing of patients, pre-oncology was no longer tested and the recovery of any disease took place in the shortest possible time.

The method of polarization harmonization of the human body. Stage one - restoration of damaged DNA and chromosomes.

1. We test DNA and chromosomes directly (found in the section - "list medicines"). The pointers that reduce the measuring level the most are entered into the "complex testing list".

2. Connect the GShK polarizer to socket 2 of the BRT device and test turning the polarizer to the right, achieving restoration of the (boost) measuring level to the list of complex testing. the turn fits within Usually, 25-45 degrees.

3. Testing the BRT meridian, where we get the greatest decrease arrows (Bench list and polarizer included in the circuit).

4. Then we carry out the BRT for 5 minutes. In the circuit of treatment: list complex testing, the GShK polarizer in right rotation and the tested meridian. In the last 2 minutes, write down the drug in 1 container - a polarizing harmonizing drug (PGP 1-1).

5. We repeat the testing of DNA, chromosomes, add it to the "list complex testing". Again we test the angle of rotation of the polarizer to the right and test the BRT meridian. We carry out BRT with other indicators of HSC, tested potencies of DNA, chromosomes and meridian for 5

minutes. Also, in the last 2 minutes, we write down the drug PGP 1-2.

6. We recommend taking GWP 1-1 and GWP 1-2, 2 grains 2 times a day, alternating them every other day, for 5-7 days.

7. After 5-7 days, repeat steps 1-5 - testing and appointment drugs. Then we also carry out, with intervals of 5-7 days, the correction of damaged DNA and chromosomes until they stop being tested.

In some cases, where there are no pronounced degenerative processes, the damaged DNA is not tested. In these cases, we test chromosomes without DNA, performing all steps 1-7. Also, immediately, simultaneously with the chromosomes, we conduct sessions of polarity correction by restoring damaged amino acids- stage two. We prescribe drugs PGP 1 - correction of damaged chromosomes and drug PGP 2 - correction of damaged amino acids.

The second stage is the restoration of damaged amino acids.

1. In the ART section, amino acids are tested in inversion, which are entered in the "list of medicines" section in the "selected" section.

2. Connect the GShK polarizer to the 3rd socket of the BRT (inverse) and test degrees of left turn. More often, the rotation of the polarizer is tested within the range of 25-45 degrees, but sometimes, in case of oncological diseases, up to 70 degrees. We test until the original measuring level is restored.

3. Next, we test the BRT meridian (the selected medication and polarizer included in the circuit) until the measuring level drops.

4. We carry out BRT for 5 minutes, in the last 2 minutes we write down the GWP 2-1.

5. We repeat testing and re-conduct BRT with new tested amino acids and meridian. We also write down the drug PGP 2-2.

6. We recommend taking 2 grains 2 times every other day (alternate) in within 5-7 days.

7. After 5-7 days, we repeat the testing and prescribing the drugs.

If the patient cannot come, lives far away, then we carry out as much as possible the entire method of polarization harmonization on the day of treatment with the appointment of PGP drugs at home. Since during the absence the patient could receive new negative energy information, leading to a false polarity, then during the next visit to the patient, we start testing from the beginning, repeating the first and second stages.

Thus, we test again: DNA, chromosomes and amino acids.

I agree with Dr. M.N. Kazantseva and our research confirm her conclusions, presented in an article at the XVI International Conference: "Practice shows that any chronic pathology is accompanied by a positive test for false polarity." She indicates that the false polarity test in these cases is always positive when tested by the ART + method. In our studies, it was found that in the study by the ART method, false polarity is revealed in very severe degenerative diseases, and in other cases it may not be tested.

In this regard, I recommend:

1. In the absence of an ART + device and in those cases when it is not being tested false polarity, in all patients to test damage to DNA, chromosomes and amino acids according to the above methods.

2. In the absence of a GShK polarizer, conduct BRT according to the Hovsepyan method, preparing a BR preparation with correction of false polarity. In this case, when carrying out BRT, directly tested DNA and chromosomes recorded on crumbs, connect to socket 2. Tested amino acids in inversion and written on crumbs - to 3 nests.

3. Polarization harmonization of the body must be carried out to the patient until no DNA, chromosomes, or amino acids are tested.

4. Conduct follow-up testing of the patient every 3 months. When new alien energy information is detected, i.e. testing damaged DNA, chromosomes, amino acids - to carry out polarization harmonization.

5. After carrying out full polarization harmonization to protect patients from foreign energy information, we recommend using Koltsov's functional state correctors (KFS) numbers 6, 7, 8.

In the process of carrying out polarization harmonization, we noted that the number of treatment sessions depended on:

1. From the age of the patient. The more a person got negative energy information during its life, the more distorted DNA, chromosomes and amino acids were tested.

2. From the severity of the disease. Even in a short period of time, man can receive strong negative energy information, which influenced the development and severity of the disease. We have noted that a fetus still in the womb can receive negative energy information, further affecting its health and development.

Let's consider a few clinical examples.

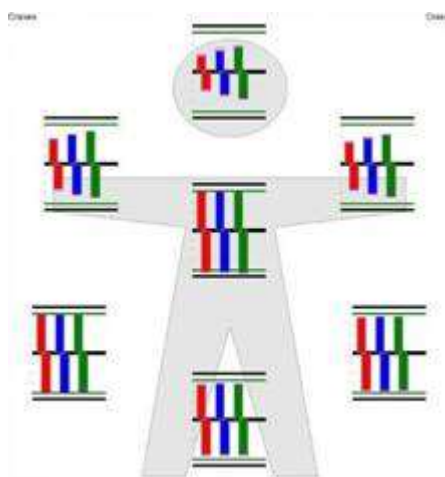

Рис. 1. СГД-характеристика организма женщины 58 лет с подозрением на микроинсульт.

The patient's complaints: weakness, headache, weakness in both hands, difficulty in speaking, headaches.

SRS characteristics of the patient: abrupt changes in the head area (normal - vertical stripes reach black horizontal lines at the bottom

and above). There are also changes at the level of the hands. Thus, this picture confirms the patient's complaints.

Рис. 2. СГД после 6 сеансов поляризационной гармонизации.

In the process of polarization harmonization of the patient, her well-being significantly improved, almost all complaints disappeared. Here, already according to the given research data and treatment results, a pronounced positive dynamics of treatment is visible. In the future, the patient was recommended a complete cleansing of the body in our Center.

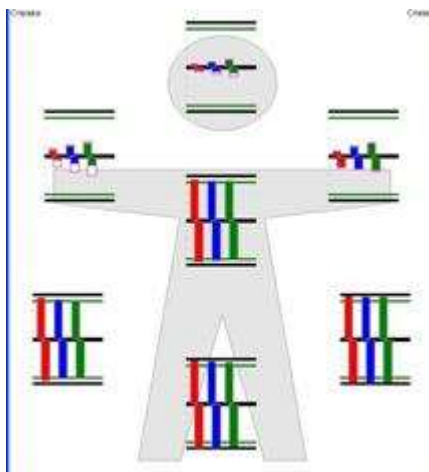

Рис. 3. СГД пациента с диагнозом: сосудистый криз головного мозга до лечения.

Рис. 4. СГД после 6 сеансов поляризационной гармонизации. Было рекомендовано очищение организма в нашем Центре.

Рис. 5. СГД пациентки с вертебробазилярной недостаточностью до лечения.

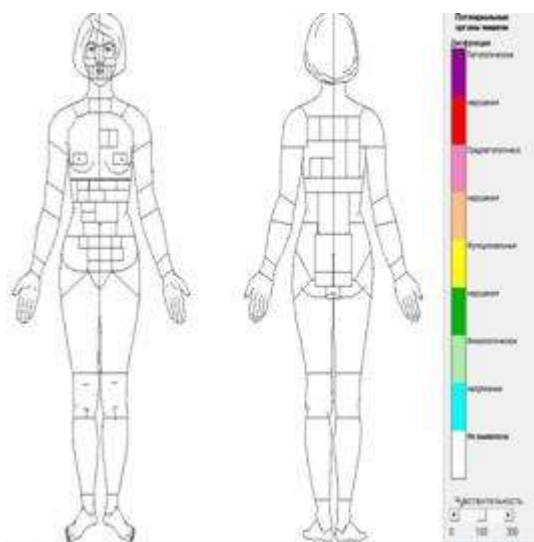

Рис. 6. СГД пациентки после 10 сеансов поляризационной гармонизации.

Conclusions:

Human polarization harmonization using a polarizer

GShK and BRT allows:

1. To free a person from false polarity - blocking energy processes in the body.
 2. Restore the spin of rotation of DNA, chromosomes and amino acids.
 3. Promotes early recovery and recovery of health person.
