

Generalized form of schistosomiasis. Case from practice

I.Yu. Yudintseva

("Eliseeva Medical Center", Moscow, Russia)

A patient from Kazakhstan applied to the Eliseeva Medical Center for examination. Complaints of severe weakness, sweating, an increase in the inguinal, axillary and cervical lymph nodes, subfebrile body temperature for one year. Chronic cystitis, pyelonephritis, large uterine fibroids, endometriosis, cysts in the ovaries, hemorrhoids. Examined by a gynecologist. An operation was proposed, but the patient refused and contacted us at the Center.

On examination: axillary lymph nodes the size of a walnut, dense, mobile, cervical lymph nodes the size of a hazelnut, inguinal lymph nodes the size of a fist, larger on the right, bulging, uneven, lumpy, hard (calcified?), Hot to the touch, painful. Lymphostasis - elephantiasis - developed on the right leg due to compression of the lymphatic vessels. Body temperature 37.1 -C.

Diagnostics using the method of vegetative resonance test (ART) revealed:

- geopathogenic load of the fourth degree on the thyroid gland and uterus;
- radioactive load of the second degree on the thyroid gland;
- electromagnetic load of the fourth degree on the thyroid gland, uterus, ovaries;
- biological indices - 15, 16;
- health level 4/3;
- a pronounced degree of depletion of the immune system;
- depletion of the endocrine system of the fourth degree;
- mental stress of the seventh degree;
- the Epstein-Barr virus is tested, cytomegalovirus in the lymphatic system, schistosoma - genitourinary and intestinal, Trichomonas, chlamydia, Trichinella - in the uterus; herpes viruses: zoster, simplex type I and II.

Anamnesis revealed: the patient was in China a year ago, six months ago in Egypt with her daughter. After the trip, my daughter and mother had cystitis, allergic reactions on the skin.

Treatment and cleansing of the body in the hospital were carried out:

- resonance frequency therapy (RFT) on the device "MINI-EXPERT-T" (firm "IMEDIS") according to the tested programs of F pathogens;
- exogenous bioresonance therapy with fixed frequencies, aimed at restoring immunity, therapy for fibroids, cystitis, pyelonephritis, hemorrhoids;
- induction therapy: programs P5, P10;
- bioresonance therapy along the selected meridians, five sessions of thirty minutes each.

The following homeopathic remedies have been prepared:

- 6.2 Hz to remove pathogenic loads;

- Bach Flowers;
- drainages.

Two liver tumors were performed:

- 1 day Essentuki and sorbitol;
- Day 2 rosehip and sorbitol.

Four hydrocolonotherapy procedures were performed.

Herbal medicine prescribed:

- choleric fees;
- laxative fees;
- renal fees.

Diet therapy:

- a protein-free plant-cereal diet;
- three days of relative hunger, taking freshly squeezed citrus juices (a mixture of lemon, grapefruit, orange) and herbal decoctions;
- drink plenty of water 2–2.5 liters per day.

Immunomodulators:

- TF plus two capsules three times a day for 7 days;
- TF "Advensd" two capsules three times a day for 7 days.

On the second day of treatment, the patient began to experience an exacerbation. The body temperature rose to 37.7 -C, red bloody urine with blood clots began to be released.

BRT was performed along all meridians through the "golden section" for 30 minutes, urine was placed in the third inverted container. At the end of the treatment session, a BR-drug was recorded, which was prescribed 5 globules every thirty minutes. Two hours later, the urine turned pink. After five hours, it is transparent, straw-colored. The bleeding has completely stopped.

On the fourth day, uterine bleeding with films, clots, flakes began, which stopped on its own within 24 hours.

The next day there was intestinal bleeding, not for a long time and stopped on its own.

After the course of treatment in the hospital, the following was revealed on the control diagnosis.

On examination: the cervical and axillary lymph nodes are not palpable, the inguinal lymph nodes are the size of a walnut, not hot, painless. The lymphostasis of the right leg is gone. The body temperature is 36.7 -C, the state of health is good.

When diagnosed using the ART method:

- geopathogenic load of the first degree;
- the radioactive load is not tested;
- electromagnetic load of the first degree;
- biological indices - 11/12;
- health level - 2/3;
- a moderate degree of tension of the immune system;
- stress of the endocrine system of the third degree;
- mental stress of the third degree.

Pathogens:

- Epstein-Barr virus in D30;
- herpes virus type II D60;
- cytomegalovirus D60;
- Schistosoma, Chlamydia, Trichomonas, Trichinella are not tested. The following recommendations are given:

1. Continue taking the drug "Advensd" TF, 1 capsule three times a day during food Time. Ten days to drink, ten days off, and so on (3–6 months).
2. TF plus one capsule three times a day. Ten days to drink, ten days break and so on (3–6 months).
3. Metosept one capsule twice a day after meals. One month to drink, one one week off, one month off drinking, one week off, one month off drinking.
4. Vitnorm one capsule twice a day after meals. Course of admission exactly the same as that of the Metosept.
5. Normoflorin B take one tablespoon. Three times a day for thirty minutes before meals. The course is two to three months.
6. Normoflorin L take one tablespoon. Three times a day through thirty minutes after eating. The course is two to three months.
7. Bactrum one capsule three times a day with meals. The course is two to three months.
8. Maxifam, one tablet three times a day with meals. The course is one month.
9. Recommendations on getting out of hunger and further correct nutrition.
10. Control ultrasound.
11. Consultation with a gynecologist.
12. Control diagnostics in two to three months.

At the request of the patient, her daughter was examined. She was diagnosed with the Epstein-Barr virus, schistosome, cytomegalovirus. Treatment was prescribed.

Conclusions: complex treatment using BRT, RFT, homeopathy, herbal medicine, immunomodulators and cleansing of the body give very good results even with such formidable infections as: Epstein-Barr virus, schistosoma, cytomegalovirus, Trichinella, Trichomonas, chlamydia.
