

## The results of testing military personnel at the APK "IMEDIS-EXPERT"

IN AND. Botieva, T.T. Zhirnova

(hospital in Mozdok FGKU "1602 VKG" of the Ministry of Defense of the Russian Federation, North Ossetia - Alania, Russia)

In order to implement in the subordinate military medical institutions of the Southern Military District measures to counter the illegal consumption of narcotic and psychotropic substances, the hospital uses a vegetative resonance test (ART) as a method of preliminary diagnostics.

Purpose of work: based on testing military personnel show the importance of the HSC (hardware and software complex) "IMEDIS-ESPRT" in the examination of people who use drugs and toxic substances.

Materials and methods: to solve the problems were examined conscripts for conscription and contract service with suspicion of using narcotic and toxic substances: only 33 (100%) people, of which: 8 (24.4%) contract servicemen and 25 (75.6%) conscripts.

Below is a table of research results.

table

Indicators	2013 g.		2012 r.	
	Abs.h .; %	Abs.h .; %	Abs.h .; %	Abs.h .; %
Military personnel 33/100%				
Under contract 8 / 24.4%	Total - 3; 9.2%	Floor - 1; 5.8%	Total - 5; 15.2%	Floor - 1; 5.8%
On call 25 / 75.6%	Total - 10; thirty %	Floor - eight; 47.1%	Total - 15; 45.6%	Floor - 7; 41.3%

The obtained positive results were further confirmed by the immunochromatographic method "Immuno-Chromium".

We have studied and evaluated the positive results of military personnel using narcotic and toxic substances. All servicemen were examined by the IHC (military medical commission) and presented for compliance with further service.

Conclusions: hardware-software complex "IMEDIS-EXPERT", recommended for examination of servicemen for the fact of using narcotic and toxic substances, is highly specific, informative.
