

Essences "Rostok" - experience and method of application of bioresonance therapy  
in combination with ampoules of the Institute of Biosensorics

V.M. Taneva<sup>1</sup>, N. Wolgemut<sup>2</sup>

(<sup>1</sup>LLC "Formula Health", Burgas, Bulgaria; <sup>2</sup>Center of therapy "Rostock  
Essences ", Graz, Austria)

#### Introduction

The environment is changing very quickly in a psychoemotional, ecological, technogenic and informational direction. Combinations of these conditions and loads deplete adaptation and compensatory mechanisms. The need to search for new effective methods applies not only to academic medicine, this especially applies to information medicine in all variants: vegetative resonance test (ART) "IMEDIS-TEST", bioresonance therapy, multiresonance therapy, electroacupuncture according to R. Voll, magnetotherapy, frequency therapy, drug test, etc.

The use of the IMEDIS equipment gives the doctor an unlimited opportunity to test and remove these loads, to balance and restore the body's balance at all levels.

Since November 2012, we have started using Rostock essences in their native form for the treatment of our patients. The results were presented as a presentation at a conference last year.

The successful use of Rostock essences is due to the kind support and responsiveness of Mrs. Nikola Wolgemut.

#### Material and methods

In the period from November 2012 to the end of February 2014, more than 1000 patients aged 1 to 85 years were treated. Major diseases: SARS, acute respiratory infections, allergies, dysbiosis of the small and large intestines, diseases of the digestive tract, overweight and obesity, stress and nervous tension, arthritis, plexitis, infertility and menstrual irregularities.

Special three groups of patients in whom the use of essences had a special effect:

1. Acute illnesses in the form of influenza, acute respiratory infections, allergies, illnesses digestive tract in the form of gastritis and colitis, inflammation of the bladder.
2. Psychosomatic and psycho-vegetative diseases. This is often depressive phases, headaches and shoulder pains, accelerated pulse, stomach pains, irritability, emotional overreactions, inability to unload and turn off, disturbances in concentration and sleep with simultaneous fatigue. The number of such diseases has increased over the past year.
3. Children with developmental delays, Down syndrome, autism. These children are very often suffer from chronic inflammation of the bronchopulmonary system, genitourinary system and digestive tract.

#### Strategy and therapy

1. The choice of essences is associated with two important goals: improving the condition and
-

treating acute symptoms and addressing root causes.

2. Several types of therapy have been used:

2.1. During bioresonance therapy (BRT) small bottles of essences "Rostok" were placed in the 2nd or 4th container of the apparatus. Bioresonance preparations (OBR, CHR) were recorded at the end of BRT.

2.2. Working mixtures were made, usually from 8-10 essences. Dosage determined as directed or tested.

2.3. A drop of Rostock essence was added to 1 liter of drinking water, which the patient drank in a day. This method of application, especially after BRT, gave a very rapid improvement in the condition in patients with recent psycho-emotional problems, flu, inflammation, pain immediately after injury.

2.4. Essences were taken orally - in acute cases 2-3 times during BRT session. With this method, BRT became much more effective. Over the next days, but not more than a week, they took 0.5-1.0 liters of drinking water with the selected essences.

Thanks to Ms. N. Kempe, Head of IBBU (Graz, Austria), we have a large selection of information vials. These information ampoules are used for therapy using the equipment of the IMEDIS Center.

In the last six months, during the BRT, also IBBU information vials have been used. These ampoules should be very carefully included in the therapy, preferably through the stand for ampoules in 2 cups. The following ampoules have been added to enhance and complement BRT:

1. Cytosine to support DNA repair.
2. Thymine to support DNA repair.
3. Adenine to support DNA repair.
4. Guanine to support DNA repair.
5. Enzymes - enzyme information for DNA self-repair.
6. DNS Deoxyribonucleic acid to support self-healing

DNA.

Patients were more often treated with enzymes and DNA preparations. There was a very clear improvement during and after BRT in all patients. A large number of patients also received BRT in combination with an induction program.

The most commonly used essences "Rostock": M essences mixtures, SoM essences, special mixtures, C chakra essences, MET essences metals

A special group of essences with a very strong and special effect: M30 Protection, SoM3 Feng Shui, SoM8 Master protection, SoM18 Repair, SoM20 Hormones, SoM22 DNA, SoM22 Shelter.

From mid-November 2012 to the end of February 2014, all patients treated with the addition of Rostock essences showed a very clear improvement.

At the first appointment, we asked patients to bring all the results of blood tests, hormonal status, ultrasound, computed tomography, X-rays and others. In the course of treatment and after its completion, repeated

---

clinical examinations and compared the results.

Mutual understanding between the doctor and the patient is especially important, the patient must successfully fulfill his role in the treatment.

All patients were diagnosed using the ART "IMEDIS-TEST" method and an individual treatment program was determined. The program included endogenous and exogenous BRT, electronic homeopathy, herbal medicine, Dr. Schussler's salts, nutrition according to the blood group of Dr. Peter D'Adamo, dietary supplements and always included Rostock essences.

### Clinical examples

1. In the last year, a group of patients emerged who had similar psychosomatic and psycho-emotional problems. They are united by the fact that they are women with very intense professions: teachers, doctors, investigators, court and police officers. Patients complain of depression, anxiety, irritability, emotional overreactions, inability to relax and turn off, impaired concentration and sleep, constant fatigue. All were treated according to individual programs with very good results. In 5 patients, only essences "Rostock" helped with vegetative reactions and crises. They were connected during BRT into the 2nd or 4th container of the device or were given directly to the patient. After BRT, the treatment was continued by taking a working mixture of essences.

2. The second group consists of children with developmental delays, Down syndrome and autism. These patients had chronic inflammation of the bronchopulmonary system, urinary bladder, and diseases of the digestive system. These health problems were solved with the help of BRT, induction programs, homeopathy, herbal medicine, Dr. Schussler's salt.

Irritability, overreaction, movement disorders, epileptic seizures, burden children and parents on a daily basis and make life difficult. Treatment with antiepileptic drugs does not always lead to the expected results. Two factors are critical to the development of epilepsy. This is, on the one hand, an innate readiness for epileptic seizures, on the other hand, acquired or congenital brain damage.

The environment and the circumstances of life play a special role. Sprout essences are very suitable for limiting and reducing the negative impact of these circumstances. Daily intake of the correct working mixture improves adaptation to the surrounding world. In cases of acute illnesses, such as: flu, OVI, allergies, with increased meteosensitivity, essences "Rostok" act just wonderfully!

Reception of essence "Rostock" can be combined with the simultaneous intake of other medications, while reducing the risk of side effects.

All this facilitates and improves the social adaptation of patients.

### Conclusions:

1. Equipment "IMEDIS" provides an exceptional opportunity test, make a correct diagnosis and successfully treat diseases in

which the mainstream medicine failed to achieve results.

2. Application of essences "Rostok" in the work with the equipment "IMEDIS" allows the use of multiple therapeutic options and therapeutic combinations for the implementation of treatment.
