

Optimization of structured energy flows in the body -
a prerequisite for successful therapy of diseases

N. Kempe

(Institute of Biosensorics and Bioenergetic Environmental Research,
Liboch, Austria)

The concept of energy, introduced by physicists, is the ability to perform work. More precisely, energy (ancient Greek ἐνέργεια - action, activity, force, power) is a scalar physical quantity, which is a single measure of various forms of movement and interaction of matter, a measure of the transition of the movement of matter from one form to another.

In "lifeless" natural science, this very general formulation is valid. If a physical system is closed, then its energy is stored in this system during the time during which the system will be closed. This statement is called the law of conservation of energy.

At the same time, a variety of types of energy are distinguished: in mechanics it is potential and kinetic energy, in the theory of electricity it is electric, magnetic and electromagnetic energy, in the theory of gravitation it is gravitational, there is atomic and nuclear energy, which is divided into the energy of weak and strong interaction, in chemistry it is chemical energy, there are concepts of thermal energy in thermodynamics, explosion energy, vacuum energy and even "dark" energy.

Living organisms are open systems that are in continuous interaction with the world around them. Many of the aforementioned processes occur in living organisms, but since ancient times, the concepts of "living energy" have also been introduced to describe the most diverse processes at different times and in different parts of the globe. Different names were used, but the same thing was meant - vital energy, as necessarily inherent in all living things. All vital functions and life as such depend on its quality, quantity and dynamics (movement inside a living organism, penetration into it and exit).

The first necessary condition successful work v areas energy-informational medicine is the creation for oneself of a holistic picture of the functioning of the human body. Otherwise, we will all the time slip into symptomatic treatment.

In this holistic picture, the concepts of "information" and "energy" are fundamental. In this case, the concept of energy accepted by us for explanation will differ from that generally accepted in "non-living" science. History provides us with many examples of this approach. Chinese, Korean, Indian medicine, shamanism, yes, in general, all ancient healings are engaged in correcting the quantity, quality and dynamics of energy flows in the body.

The concept of "information", which appeared only 70 years ago, turned out to be very productive for the creation of models for describing complex processes of functioning of living organisms; the young science of cybernetics began to engage in their verification.

Nowadays, a lot of healers are already working on this new (and in fact, very ancient) paradigm. In our work, having in our hands such a powerful device - the IMEDIS system, one should also think about the hierarchy of therapy. On my own twenty years of experience, I became convinced how fruitful the healing process can be, if, when drawing up the concept of treatment, the energy processes in and around the body are taken into account. Moreover, our system has very great capabilities for diagnostics and control of processes in the body.

When constructing the concept of such therapy, we proceed from the fact that a living organism constantly receives, both from space and from the Earth, structured energy carrying certain information necessary for the existence of this organism and for solving certain problems of evolution. It is possible that the unstructured part of this energy also performs certain functions in the body. This energy must go to different spatial divisions of the body. After this energy has transmitted the information it carries, it must leave (perhaps only partially) from the body, mostly into the Earth. If this continuous flow is disturbed for some reason, the energy is delayed somewhere or does not fully transmit the carried information, then serious functional disorders occur in the body, energy blockages occur, the control and recovery process in DNA ceases to function, and much more. In the body, on the one hand, numerous dysfunctions develop, on the other hand, desynchronization of the passage of the necessary chemical reactions begins. The person begins to experience more and more discomfort, and everything ends in illness. At the same time, if the functions of the inputs and outputs of energy are not restored and the interference with the spread of this energy is not removed, then various symptoms increase, depending on where the blockages were formed, leading to the disease. Moreover, in this state, therapy is already bad or does not work at all. The person begins to experience more and more discomfort, and everything ends in illness. At the same time, if the functions of the inputs and outputs of energy are not restored and the interference with the spread of this energy is not removed, then various symptoms increase, depending on where the blockages were formed, leading to the disease. Moreover, in this state, therapy is already bad or does not work at all. The person begins to experience more and more discomfort, and everything ends in illness. At the same time, if the functions of the inputs and outputs of energy are not restored and the interference with the spread of this energy is not removed, then various symptoms increase, depending on where the blockages were formed, leading to the disease. Moreover, in this state, therapy is already bad or does not work at all.

In fact, the process described so simply is very complex and non-linear. At the seminar, this complexity and emerging syndromes will be discussed in more detail. But here we will point out several important measures for correcting this condition and eliminating dysfunctions that have already arisen. It is important to start with this therapy. After the removal of energy-informational blockages and dysfunctions, the further necessary therapy will certainly be more successful.

So, before starting work with a patient to reduce and eliminate dysfunctions in his body, you should:

1. Assess the situation with the state of incoming and outgoing energy through segmental diagnosis and autonomic resonance test.
2. Check the presence of blockades and approximately estimate the moments of their education through vegetative resonance test.
3. Conduct preliminary bioresonance therapy in a temporary modulation by frequencies of energy inputs (4 Hz, 10 Hz, 12.5 Hz and 15 Hz), energy outputs (77.5 Hz, 80 Hz, 82.5 Hz and 99 Hz) and free flow of energy (77.5 Hz, 80 Hz, 82.5 Hz, 99 Hz, 40 Hz, 42.5 Hz, 45 Hz and 99.75 Hz) using the fast run method. Moreover, exactly those frequencies are selected that were

pre-tested! The brute-force time is tested in the same way. Our experience says that this time is usually in the range of 1–2.5 sec. The duration of therapy can be tested with a biotensor. It usually lies in the range of 400-600 seconds. During the last 100 sec. 3-4 globules are recorded in the first container. Then quadrant measurements and segmental diagnostics are done again. With the improvement of the integral parameters and measured amplitudes, one can begin to carry out bioresonance therapy, which is necessary to remove the body from the state of the disease. Regardless of the type of therapy, add the just recorded drug to the second container for the entire duration of therapy. From the selector, add something what was intended according to the chosen therapy concept and additionally the drug "Orgone Energy" ("Medpharma") and the tested drug "Cosmic Energy" ("Medpharma" and IBBU). At the end of therapy, it is imperative to carry out segmental diagnostics again. Integral parameters, as a rule, are normalized to normal.

4. It is also very important to identify and try to eliminate existing energy blockades. To do this, the APK "IMEDIS-EXPERT" has many different possibilities, both in the selector and in the form of exposure to certain resonant frequencies. Here are some of the most effective examples of the impact on energy blockages: from the "Medpharma" group - these are "Grounding of negative energy", "Transformation of energy blockades", "Spiritual development", from the series of drugs "GUNA". These issues will be covered in detail at the seminar.

5. There are several options for recording a medicinal product: this is a recording on media in the last 210 sec. therapy, and recording without a patient on the carrier in transfer mode, and the appointment of a constitutional drug, and much more that you know, depending on the circumstances.

If, before starting therapy, according to the results of segmental diagnostics and quadrant measurements or measurements according to R. Voll, it is clearly visible that the patient's vital energy is too low, it is very good to carry out the so-called vitalization of the body, namely, to carry out an induction program of energization or to conduct bioresonance therapy with modulation with vitalization frequencies in brisk search mode in the sequence 40.3 Hz, 42.7 Hz, 43.5 Hz, 43.7 Hz, 45.45 Hz, 49.65 Hz, 49.75 Hz, 56.65 Hz, 56 , 75 Hz, 59.5 Hz, 59.8 Hz 62.0 Hz. This is one of the rare cases where pre-testing of each individual frequency is unnecessary! Just run this sequence of frequencies with a search time of 1–2 sec. for a period of 300-500 sec. This program turns out to be much more effective than the corresponding induction program.

When working with energies, it is also very important to check and correct the so-called state of the spin. These are four very important frequencies: 2.5 Hz, 5 Hz, 7.5 Hz, and 100 Hz. Pre-testing is mandatory here!

It turned out to be especially important to carry out energy training before conducting induction programs, especially programs with a number above 30.

And one more very interesting opportunity to optimize energy flows in the body. This is the stimulation of the grounding of the waste energies. To do this, in the selector

many interesting possibilities are offered, which are easily found in the search engine through the word "grounding". This is about 40 drugs. Moreover, already testing them helps a lot to deepen the diagnosis. For example, there can be many reasons for swelling of the lower extremities. By testing the preparations from the "energy grounding" series, you can more accurately determine the cause of the formation of such edema, and their application gives a quick and stable result. But it is imperative to remember that in this case it is necessary that the energy inputs and outputs be open. By the way, closed outputs, especially blocked frequencies of 77.5 Hz and 82.5 Hz, are often the reason for the formation of such edema.

Of course, with such a purely "energetic" therapy, it is necessary to control the state of the seven chakras. Switching on and off and the bandwidth of the chakras obey very complex patterns. Moreover, if at the moment some chakra is closed or not functioning enough, this does not mean that it must be forcedly opened. We have a very good indicator of the need to correct chakra functions - Platinum 1000. If the test says that there is no such need, then you can start working with energies without dealing with the problems of chakra correction. If correction is needed, then it must be done very carefully, checking each chakra at its entrance and exit, for example, with the help of "OTI" preparations.

Restoring energy balance is a prerequisite for the success of psychosomatic therapy.

These methods of correcting the flow of vital energy in geriatrics, in the treatment of elderly patients, turned out to be especially effective.

Correction of the body's energy, if done correctly, always increases its adaptive reserves.

It seems to us that this approach to treatment fits well with the holistic vision of the functioning of living open systems.
