

APK "IMEDIS-EXPERT" 4th generation - a new step in systemic therapy

M.N. Kazantsev
(Vladivostok, Russia)

Introduction

A feature of the bioresonance method is the possibility of using a systematic approach in diagnostics and therapy. "It is necessary to treat the patient, not the disease!" - within the framework of our method, this postulate is not just proclaimed, but actively implemented. There are several methods of different authors that successfully work using a systematic approach. One of such techniques is the author's technique, which has been used over the past seven years. The main stages of diagnostics and therapy were presented by the author in the reports of the 2010–2015 Conferences.

In this article, one of the sections of the technique will be proposed for consideration, namely, a variant of bioresonance therapy - a level bioresonance drug or BRP +. The maximum effect in curing a patient can be obtained if bioresonance drugs are used. It is bioresonance drugs that give a fast, high, systemic result. They are strictly individual and work very powerfully. With the use of a correctly created bioresonance drug and the presence of sufficient reserves of the patient, an effect can be obtained that cannot be compared with the result of the use of any allopathic drug. One of these drugs is a bioresonance level drug, or BRP +. It refers to bioresonance drugs, which include only signals written off from the patient. Contrary to the above statement about the high efficiency of the PDU, the application of this technique from 2009 to 2014 gave high results very unstable. In some patients, the results were very, very impressive.

For example, patient D., 18 years old, with acute neuritis of the facial nerve. Anamnesis 1 month, complex allopathic treatment, including hormonal therapy and IRT, without effect. Taking the drug BRP + completely restored the function of the facial muscles within one month. Result: recovery. Follow-up - 2 years.

Patient K., 45 years old. Hypertension stage IIA. I used Lorista every day. Without allopathic therapy, the pressure rose daily to 150-160 / 100 mm Hg. The therapy with the use of BRP + was carried out for 2 months. Result: recovery. Blood pressure is normal, he does not use drugs. Follow-up - 5 years.

At the same time, in 30% of cases, the use of BRP + caused exacerbations, which required discontinuation of the drug, its repeated correction. Exacerbations have arisen as a result of the difficulty of obtaining a pure control signal from the patient. With the outward simplicity of creating a PDU +, in fact, it was far from easy to obtain the necessary control signal. Since January 2015, the treatment began to be carried out on the apparatus of the APK "IMEDIS-EXPERT" of the 4th generation. The percentage of emerging exacerbations with the use of BRP + decreased to 5%. At the same time, it has become an order of magnitude easier and faster to create a drug using the new apparatus. APK "IMEDIS-EXPERT" 4th generation is so easy and accurate

records the necessary signal, which made it possible to significantly expand the list of nosologies that it is possible to work with using the BRP +.

Materials and methods

Before proceeding with the creation of a systemically operating PDU +, it is necessary to complete several steps:

1. Determine the level of ART + at which we will work.
2. Create a complex index SPU (the sum of pathogenetic indexes)

(the technique is described in the article by M.N. Kazantseva in the conference abstracts of 2015).

3. If necessary, carry out the procedure for correcting amino acids.
4. Through the SPU, determine the organ for therapy. Create PDU + on the selected organ with its subsequent application will give a systemic result.

Creation of BRP +:

a) We place the device for magnetic therapy "belt" in the projection of the selected organ and connect it to the output of the frontal electrodes of the BRT on the APC "IMEDIS-EXPERT" of the 4th generation.

b) We select the therapy mode: "Swing" along all classical and Folle meridians in the fastest possible mode.

c) SPU is recorded on pure homeopathic crumbs and placed on the drug testing plate. During testing, it causes a decrease in the original measuring level.

d) We carry out therapy in the selected mode in the projection of the selected organ, rotating the handle of the "Coefficient" device from 4.5 to 3.5. The therapy is carried out for 30 seconds per division. The selector is disabled.

e) We write down several PDUs: one at each position of the "coefficient" knob from 3.5 to 4.5 separately for a separate clean crumbs (several grains each) for 60 seconds.

f) We check the recorded PDUs by placing the cups one by one on the MT plate. We select the one that will definitely give the restoration of the arrow. Let me remind you that there is a glass on the MT with a SPU recorded on the crumbs, which, when tested, causes a decrease in the measuring level.

g) We rewrite the selected drug in the 4th container in the 1st APK IMEDIS-EXPERT of the 4th generation. In the 4th container there is a glass with the recorded BRP + on several grains, and in the 1st container there is a glass with pure homeopathic grains (full).

Correctly selected and recorded drug during testing completely "removes" SPU and brings the corresponding body system to an ideal state. The above-described BRP + works systemically, heals the body, not just the organ. You can also create a PDU + that acts within a specific area or tissue (joint, nerve, etc.). Then, not SPU is used as an indicator, but "D-large" from the affected area.

A small note: in no case should you record the BRP + in the presence of any helminthic invasion.

Research results.

The use of BRP +, recorded from the central nervous system, gives the following results:

- normalization of cerebral circulation;
- normalization of biorhythms: sleep-wakefulness, menstrual cycle;
- increasing potency;
- normalization of other endocrine disorders; BRP + (from the central nervous system) is used in combination therapy with other BRP +;
- pronounced psychoemotional effect: amazing adequacy in reactions without drowsiness or agitation; sometimes a little euphoria;
- in some cases, a noticeable increase in the patient's psychic abilities.

Application of BRP +, recorded from the liver area, gives the following results:

- normalization of cellular and humoral immunity; it is used independently and in complex therapy in conjunction with BRP (from the area of the small intestine) using pathogenetic chains according to A.A. Hovsepyan;
- highly effective in systemic degenerative pathology: oncology, autoimmune processes;
- normalization of blood pressure (blood pressure);
- normalization of hormones: BRP + (from the liver area) is used in complex therapy with BRP + (central nervous system);
- cure for any allergies;
- improvement and recovery in chronic skin diseases: eczema, psoriasis;
- stimulation of antiviral and antifungal immunity;
- is used in the complex therapy of chronic viral hepatitis. Excellent results are obtained when using BRP + for facial neuritis, trigeminal neuralgia and other neuritis and neuralgia.

Good results in diseases of the spine: osteochondrosis, herniated discs, vertebrobasilar insufficiency, ankylosing spondylitis in the initial stage.

The high efficiency of BRP + shows when recording from organs on which onco-scales and onco-nosodes are tested. In cases where official medicine does not yet determine oncology in a patient and, accordingly, does not treat, BRP + is an option of choice. Good results have been obtained in the treatment of benign tumors without onco-nosodes and together with onco-nosodes in organs:

- breasts;
- prostate;
- thyroid;
- rectum.

Satisfactory results are obtained when using BRP + in the treatment of degenerative eye diseases: hyperopia, initial cataract.

Conclusions:

1. BRP + is the option of choice for severe chronic degenerative pathology due to its high efficiency.

2. Creation of BRP + on the apparatus of APK "IMEDIS-EXPERT" is very difficult; the use of these BR drugs causes an exacerbation in 30% of cases.

3. Creation of BRP + on the apparatus of APK "IMEDIS-EXPERT" of the 4th generation performed easily, with a high degree of accuracy: exacerbations occur in 5% of cases and are associated with the severity of the patient's pathology.
